Vol. 2 of 2 (Classic Reprint)** Charles Darwin,2017-09-11 Charles Darwin was a well known English geologist and naturalist  
He is best known for his scientific theories and contributions to evolutionary theory Arguably his most important work was

result of the process of natural selection His two book series entitled The Variations of Animals and Plants Under  
Domestication offers profound insight into the beliefs and evidence that established the basis for Darwin s work on evolution  
and the study of biology The domestication of animals and the domestication of plants is thoroughly explored in this book  
along with Darwin s theory of heredity which discusses the passing of traits from parents or ancestor onto offspring This  
theory was termed and may be more popularly known as pangenesis Darwin s work with heredity is known across the globe  
as he established that all species have descended over time from common ancestors This concept links back to his work on
