Framework Circular Economy:

Sustainable Products in the Circular Economy Magdalena Wojnarowska, Marek Ćwiklicki, Carlo Ingraio, 2022-04-24 This book explores how the circular economy influences product design in today's business and society. Drawing on contributions from a wide range of expert thinkers, this volume assesses the existing approaches, strategies, and tools which facilitate socially and environmentally responsible production and consumption systems. It then goes on to highlight the ways in which the circular economy conceptual framework could be implemented effectively at both micro product policy and macro sustainable consumption levels in order to alter the industrial landscape and increase its interconnectedness with materials and scarce resources. Highlighting the pros and cons of transitioning to this new model, the book also cautions that it will only be made possible via significant behavior change at both industry and consumer levels. *Sustainable Products in the Circular Economy* will be of great interest to students and scholars of sustainable manufacturing, sustainable consumption, corporate social responsibility, and business ethics. It will also be relevant to industry professionals whose work dovetails with these areas.

Circular Economy, 2018 In a circular economy, waste generation is minimised and the value of products, materials, and resources is maintained for as long as possible. It is a new economic model that offers tremendous opportunities. It helps save natural resources, combats climate change, makes production, consumption, and waste management more sustainable, and creates green local jobs. To stimulate the transition towards this new model, the European Commission released a circular economy action plan in December 2015. Two years on, one of its last milestones, a framework for monitoring progress, has just been adopted. Tracking progress is not easy as this transition is taking place in many different areas. But the monitoring framework is an important tool showing how the various elements of the circular economy are beginning to mature. It will help citizens and policymakers identify success factors and show where more action is needed. The results will help set new priorities as Europe moves towards its long-term aim: a more circular economy.
