

# UNDERSTANDING ALLERGIES

## What Is An Allergy?

An allergy is an overreaction or hypersensitivity of the body's immune system to normally harmless substances, called allergens. An allergic reaction occurs when the body's immune system responds to an allergen as if the substance were disease-causing. Subsequent responses to this substance can result in physical symptoms that range from mild to severe.

## Who Gets Allergies?

The tendency to develop allergies is thought to be inherited, because they commonly develop in those who have a family history of allergies. It is possible for anyone to develop allergies at any age. Allergies often occur in clusters and affect both children and adults. This could mean allergen exposure to people with no family history or those diagnosed in those with a family history.

## What Are Common Allergens?

Allergens can enter the body in a number of different ways, including inhaling pollen, drinking, ingesting (as with hot sauce), and contact with the skin or eyes. Common allergens include pollen, mold, animal hair or dander, dust mites, certain medications like aspirin, penicillin, and certain foods like eggs, peanuts, eggs, milk, wheat, and soybeans.

## Anaphylaxis: An Allergic Emergency

Anaphylaxis is a life-threatening reaction. The onset of this reaction may occur within minutes or minutes of exposure. Symptoms can include a rash with some redness of the face, hives, swollen lips and throat, and swelling of the airway, leading to breathing difficulty, and there is a drop in blood pressure. Swelling can stop and the body may stop reacting, but medication to get additional oxygen, blood volume and death can occur. Anaphylaxis is the most severe allergic reaction and is potentially fatal and medication such as antihistamines are more likely to cause complications than any other allergen. Anaphylaxis is not a common reaction and can be prevented with proper medication and the help of a physician.

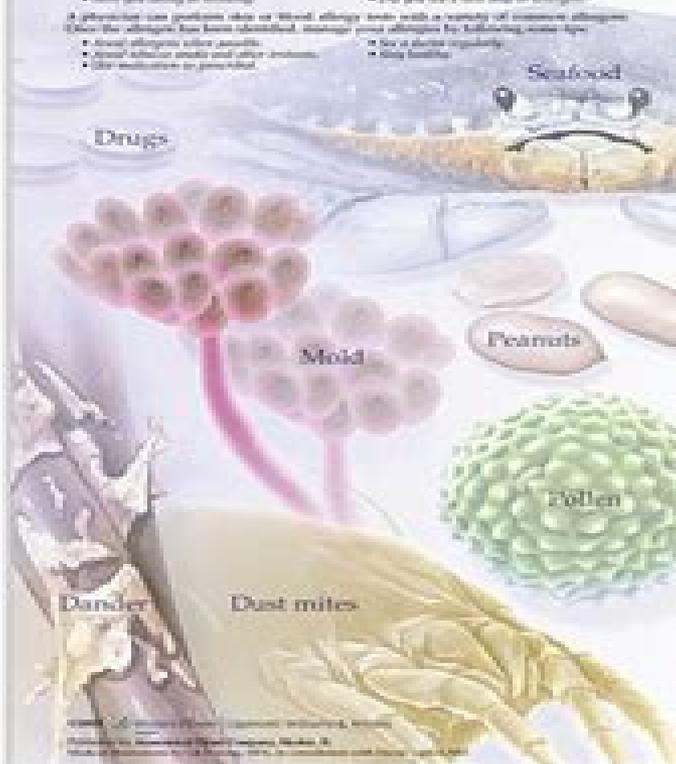

## Managing Allergies

The first step in managing allergies is to identify the type of reaction you are having, whether it is an acute, chronic, or difficulty breathing, hives, or to identify the trigger in the reaction that led to the symptoms. Ask yourself a few questions:

- Did you eat anything new?
- Did you use any new medicine?
- Did you get a new pet?
- Did you go outside?
- Did you get a new job or hobby?
- Did you get a new car or truck?
- Did you get a new dog or cat?
- Did you get a new job or hobby?

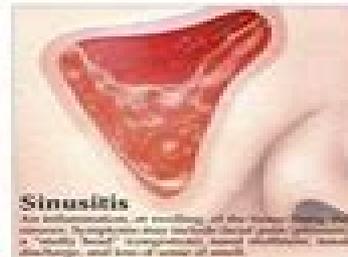

A physician can perform skin or blood allergy tests with a variety of common allergens. Once the allergen has been identified, manage your allergies by following some tips:

- Avoid allergen when possible.
- Use a doctor regularly.
- Avoid allergen when you are sick.
- Stay healthy.
- Use medication as prescribed.
