**Market Risk Analysis, Value at Risk Models** Carol Alexander, 2009-02-09 Written by leading market risk academic Professor Carol Alexander *Value at Risk Models* forms part four of the *Market Risk Analysis* four volume set Building on the three previous volumes this book provides by far the most comprehensive rigorous and detailed treatment of market VaR models It rests on the basic knowledge of financial mathematics and statistics gained from Volume I of factor models principal component analysis statistical models of volatility and correlation and copulas from Volume II and from Volume III knowledge of pricing and hedging financial instruments and of mapping portfolios of similar instruments to risk factors A unifying characteristic of the series is the pedagogical approach to practical examples that are relevant to market risk analysis in practice All together the *Market Risk Analysis* four volume set illustrates virtually every concept or formula with a practical numerical example or a longer empirical case study Across all four volumes there are approximately 300 numerical and empirical examples 400 graphs and figures and 30 case studies many of which are contained in interactive Excel spreadsheets available from the the accompanying CD ROM Empirical examples and case studies specific to this volume include Parametric linear value at risk VaR models normal Student t and normal mixture and their expected tail loss ETL New formulae for VaR based on autocorrelated returns Historical simulation VaR models how to scale historical VaR and volatility adjusted historical VaR Monte Carlo simulation VaR models based on multivariate normal and Student t distributions and based on copulas Examples and case studies of numerous applications to interest rate sensitive equity commodity and international portfolios Decomposition of systematic VaR of large portfolios into standard alone and marginal VaR components Backtesting and the assessment of risk model risk Hypothetical factor push and historical stress tests and stress testing based on VaR and ETL

**Value at Risk Based on Fuzzy Numbers** Maria Letizia Guerra, Laerte Sorini, *Value at Risk* VaR has become a crucial measure for decision making in risk management over the last thirty years and many estimation methodologies address the finding of the best performing measure at taking into account

unremovable uncertainty of real financial markets One possible and promising way to include uncertainty is to refer to the mathematics of fuzzy numbers and to its rigorous methodologies which offer flexible ways to read and to interpret properties of real data which may arise in many areas The paper aims to show the effectiveness of two distinguished models to account for uncertainty in VaR computation initially following a non parametric approach we apply the Fuzzy transform approximation function to smooth data by capturing fundamental patterns before computing VaR

**Measuring Market Risk with Value at Risk** Pietro Penza, Vipul K. Bansal, 2001 This book Measuring Market Risk with Value at Risk by Vipul Bansal and Pietro Penza has three advantages over earlier works on the subject First it takes a decidedly global approach an essential ingredient for any comprehensive work on market risk Second it ties the scientifically grounded yet intuitively appealing VaR measure to earlier more idiosyncratic measures of market risk that are used in specific market environments e.g. duration in fixed income Finally it encompasses all of the accepted approaches to calculating a VaR measure and presents them in a clearly explained fashion with supporting illustrations and completely worked out examples from the Foreword by John F Marshall PhD Principal Marshall Tucker Associates LLC Measuring Market Risk with Value at Risk offers a much needed intellectual bridge a translation from the esoteric realm of mathematical finance to the domain of financial managers who seek guidance in applying developments from this important field of research as well as that of MBA level graduate instruction I believe the authors have done a commendable job of providing a carefully crafted highly readable and most useful work and intend to recommend it to all those involved in business risk management applications Anthony F Herbst PhD Professor of Finance and C R and D S Carter Chair The University of Texas El Paso and Founding editor of The Journal of Financial Engineering 1991 1998 Finally there is a book that strikes a balance between rigor and application in the area of risk management in the banking industry This innovative book is a MUST for both novices and professionals alike Robert P Yuyuenyongwatana PhD Associate Professor of Finance Cameron University Measuring Market Risk with Value at Risk is one of the most complete discussions of this emerging topic in finance that I have seen The authors develop a logical and rigorous framework for using VaR models providing both historical references and analytical applications Kevin Wynne PhD Associate Professor of Finance Lubin School of Business Pace University
