Terminal Exposure:

Novel insights in rehabilitation of neglect, 2nd Edition Stefan Van Der Stigchel, Tanja Nijboer, 2015-01-09
Hemispatial neglect is the failure to report respond to or orient to novel or meaningful stimuli presented in the contralesional visual field It constitutes one of the most invalidating neurological disorders that can occur after stroke It is therefore important to treat neglect as adequate as possible and much of the research dedicated to neglect therefore focuses on rehabilitation In this special topic you will find 29 articles on the rehabilitation of neglect This Research Topic has opened new perspectives and has given us an indication of where the field is going Although some of the current rehabilitation techniques have proven to be beneficial there is limited agreement on the most valuable technique or the mechanisms underlying the ameliorating effects The Credit Risk of Complex Derivatives Erik Banks, 1997-05-14 This edition of The Credit Risk of Complex Derivatives is fully updated and enhanced It discusses and analyses the credit risks of the new financial derivatives The book commences with an overview of the regulatory environment and the renewed emphasis on risk Management It then provides a comprehensive review of complex options and swaps with extensive examples and illustrations The text concludes with a detailed discussion of portfolio credit risk issues and techniques in order to ensure the most effective and accurate understanding of complex derivative credit risk Environmental Health Perspectives , 1993

Perceptual Modification Robert B. Welch, 2013-10-22 Perceptual Modification Adapting to Altered Sensory Environments is about the study of human perception using a particular research strategy the systematic alteration of vision or audition It is assumed that by observing how the sensory apparatus copes with this disturbance it will be possible to formulate valuable hypotheses about the structure and development of normal perception and perceptual motor coordination The specific goals of this book are first to organize the vast and confusing literature on adaptation to perceptual rearrangement and second to assess its contribution to the understanding of normal perception and perceptual learning The book begins with discussions of adaptation to small prism induced displacements of the visual field Separate chapters follow on the proposition that adaptation to prismatic displacement and other forms of rearrangement is actually a form of learning adaptation to inverted and reversed vision optical tilt illusory motions of the visual field size depth distortions and distortions of form Subsequent chapters deal with studies of auditory rearrangement examine individual and interspecies differences in adaptability and the study of adaptation to the visual distortions encountered by the underwater observer The book is written for researchers and graduate students in experimental psychology It will be of value and interest whether the reader is a specialist in the area of perceptual modification or indeed a generalist Health Effects of Gasoline , 1993 **Special Report Series** Great Britain.
