Two Factorial:

Theory of Nonregular Factorial Designs Ching-Shui Cheng, Boxin Tang, 2025-05-01 Nonregular factorial designs are a class of factorial designs that enable researchers to study simultaneously the effects of many explanatory variables on a response variable of interest Factorial designs have been in the mainstream of design research for decades but interest in nonregular factorial designs has been increasing significantly in the last twenty years or so These designs are practically useful as they offer much richer and more flexible choices for experimenters to contemplate than regular designs Theoretically they present new challenges and raise new issues that require new ideas and methods to properly address This book is the first to synthesize research on this topic into a consistent statistical design framework It is focused on the theoretical underpinnings of nonregular factorial designs but emphasizes the ideas and methods of statistical designs rather than mathematical rigor Some background is provided in an appendix and the book also includes lots of worked examples to illustrate the ideas and methods Features A unified and comprehensive overview of the theory and application of nonregular factorial designs Self contained with an appendix of necessary background knowledge in factorial designs Mathematics is kept to a minimum with proofs only included if simple or insightful or is otherwise in chapter appendices Great attention has been paid to the narrative flow Lots of worked examples to illustrate the ideas and methods This book is primarily aimed at researchers and practitioners working on the design of experiments It will be a perfect entry into the field for a junior researcher and a useful reference for all researchers already in the field It could be used as a textbook for graduate students who have taken a first design course and have a passion for design ideas and research Scientists from other disciplines will find the book useful as well if their research involves multi factor experiments

Essentials of Statistics In Agricultural Sciences Pradeep Mishra, Fozia Homa, 2019-07-24 An understanding of the basics logic and theory of statistics is essential for agricultural researchers for dealing with the interpretation of data This volume presents some of the basic and necessary concepts of statistical tools specifically as applied to the statistics of agriculture and allied

fields It covers basic statistics design of experiments sampling techniques time series inference outlines forecasting models data handling and statistical software in an easy to understand manner that is aimed at students and researchers with little or no mathematical background In the agriculture scenario students and researchers face problems that can be addressed with statistical tools planning of field experiments collection of data analysis interpretation of the data etc In this book statistical theories are discussed with the help of examples from real life situations in agriculture and allied fields followed by worked out examples Each chapter is followed by a number of problems and questions that will help readers gain confidence in solving those problems The volume also provides an analysis of how data is important and introduces the reader to using statistical software such as MS Excel SAS Statistical Analysis System JMP Minitab and R from the R Foundation for Statistical Computing
