

Figure 7: Boxplots for the mean concordance of the 16 candidate visualizations and the 2 meta-visualizations under each simulation setting (left: finite mixture of points; middle: smiley face; right: mammoth) across 20 equispaced values of θ from some intervals. The proposed spectral meta-distance matrix had superior performance than the others.

Figure 8: Examples of candidate visualizations of the simulated data generated from a 6-class Gaussian mixture model (i.e., setting (i)), along with their pointwise concordance, and boxplots grouped by clusters. The plots indicate strengths and weaknesses of different methods in capturing the underlying clusters.

Synchronized Multiple Visualizations Of Chemistry:

Visualization in Science Education John K. Gilbert, 2006-03-30 Visualization in Science Education draws on the insights from cognitive psychology science and education by experts from Australia Israel Slovenia UK and USA It unites these with the practice of science education particularly the ever increasing use of computer managed modelling packages especially in chemistry The first section explores the significance and intellectual standing of visualization The second section shows how the skills of visualization have been developed practically in science education This is followed by accounts of how the educational value of visualization has been integrated into university courses in physics genomics and geology The fourth section documents experimental work on the classroom assessment of visualization An endpiece summarises some of the research and development needed if the contribution of this set of universal skills is to be fully exploited at all levels and in all science subjects

Multiple Representations in Chemical Education John K. Gilbert, David Treagust, 2009-02-28 Chemistry seeks to provide qualitative and quantitative explanations for the observed behaviour of elements and their compounds Doing so involves making use of three types of representation the macro the empirical properties of substances the sub micro the natures of the entities giving rise to those properties and the symbolic the number of entities involved in any changes that take place Although understanding this triplet relationship is a key aspect of chemical education there is considerable evidence that students find great difficulty in achieving mastery of the ideas involved In bringing together the work of leading chemistry educators who are researching the triplet relationship at the secondary and university levels the book discusses the learning involved the problems that students encounter and successful approaches to teaching Based on the reported research the editors argue for a coherent model for understanding the triplet relationship in chemical education

Visualization: Theory and Practice in Science Education John K. Gilbert, Miriam Reiner, Mary Nakhleh, 2007-12-05 External representations pictures diagrams graphs concrete models have always been valuable tools for the science teacher This book brings together the insights of practicing scientists science education researchers computer specialists and cognitive scientists to produce a coherent overview It links presentations about cognitive theory its implications for science curriculum design and for learning and teaching in classrooms and laboratories
