Post-2020 Climate Change Regime Formation Suh-Yong Chung,2013-07-18
The fate of the climate change regime hangs in the balance as the UN led negotiations try to forge a new international strategy for the post 2020 period Since 1992 the UNFCCC and its Kyoto Protocol has been the primary legal instrument to respond to the climate challenge However the intergovernmental process has been riddled with problems that

have rendered it ineffective The changing economic landscape has further made this country grouping problematic as some developing countries now emit more than some of their advanced counterparts Such problems have crippled the existing regime in adequately addressing climate change Building upon the expertise of the contributors of this volume this ground breaking collection aims to show the way forward for the intergovernmental process It is the first of its kind to explore the key features of the regime featuring meticulously researched pieces from leading experts in the field Each chapter responds to the questions surrounding the political and structural limitations of the current top down approach taken in climate negotiations and proposes various alternatives countries can take to overcome such limitations in the process of building the post 2020 climate change regime In particular this collection underscores the concept of low carbon development and green growth to make the climate change regime more effective

Tappi Journal ,1992 **Environment for Europeans ,2007** **Nontimber Forest Products in the**

United States Eric T. Jones, Rebecca Jean McLain, James F. Weigand, 2002 A quiet revolution is taking place in America's forests. Once seen primarily as stands of timber, our woodlands are now prized as a rich source of a wide range of commodities from wild mushrooms and maple sugar to hundreds of medicinal plants whose uses have only begun to be fully realized. Now as timber harvesting becomes more mechanized and requires less labor, the image of the lumberjack is being replaced by that of the forager. This book provides the first comprehensive examination of nontimber forest products (NTFPs) in the United States, illustrating their diverse importance, describing the people who harvest them, and outlining the steps that are being taken to ensure access to them. As the first extensive national overview of NTFP policy and management specific to the United States, it brings together research from numerous disciplines and analytical perspectives such as economics, mycology, history, ecology, law, entomology, forestry, geography, and anthropology in order to provide a cohesive picture of the current and potential role of NTFPs. The contributors review the state of scientific knowledge of NTFPs by offering a survey of commercial and noncommercial products, an overview of uses and users, and discussions of sustainable management issues associated with ecology, cultural traditions, forest policy, and commerce. They examine some of the major social, economic, and biological benefits of NTFPs while also addressing the potential negative consequences of NTFP harvesting on forest ecosystems and on NTFP species populations. Within this wealth of information are rich accounts of NTFP use drawn from all parts of the American landscape, from the Pacific Northwest to the Caribbean. From honey production to a review of nontimber forest economies still active in the United States, such as the Ojibway harvest of plants, recounted here, the book takes in the whole breadth of recent NTFP issues, including ecological concerns associated with the expansion of NTFP markets and NTFP tenure issues on federally managed lands. No other volume offers such a comprehensive overview of NTFPs in North America. By examining all aspects of these products, it contributes to the development of more sophisticated policy and management frameworks for not only ensuring their ongoing use but also protecting the future of our forests.
