Fundamental Principles of Radar Habibur Rahman, 2019-05-15 The important and fascinating topics of radar enjoy an extensive audience in industry and government but deserve more attention in undergraduate education to better prepare graduating engineers to meet the demands of modern mankind Radar is not only one of the major applications of electronics and electromagnetic communications but it is also a mature scientific discipline with significant theoretical and mathematical foundations that warrant an intellectual and educational challenge *Fundamental Principles of Radar* is a textbook providing a first exposure to radar principles It provides a broad concept underlying the basic principle of operations of most existing radar systems and maintains a good balance of mathematical rigor to convince readers without losing interest The book provides an extensive exposition of the techniques currently being used for radar system design analysis and evaluation It presents a comprehensive set of radar principles including all features of modern radar applications with their underlying derivations using simple mathematics Coverage is limited to the main concepts of radar in order to present them in a systematic and organized fashion Topics are treated not as abstruse and esoteric to the point of incomprehensibility but the very complex and rich technology of radar is distilled into its fundamentals The author's emphasis is on clarity without sacrificing rigor and completeness thus making the book broad enough to satisfy a variety of backgrounds and interests Thorough documentation provides an unusual degree of completeness for a textbook at this level with interesting and sometimes thought provoking content to make the subject even

more appealing Key Features Covers a wide range of topics in radar systems Includes examples and exercises to reinforce the concepts presented and explain their applications Provides self contained chapters useful for readers seeking selective topics Provides broad concepts underlying the basic principles of operations of most types of radars in use today Includes documentation to lead to further reading of interesting concepts and applications *Proceedings of 2022 International Conference on Autonomous Unmanned Systems (ICAUS 2022)* Wenxing Fu, Mancang Gu, Yifeng Niu, 2023-03-10 This book includes original peer reviewed research papers from the ICAUS 2022 which offers a unique and interesting platform for scientists engineers and practitioners throughout the world to present and share their most recent research and innovative ideas The aim of the ICAUS 2022 is to stimulate researchers active in the areas pertinent to intelligent unmanned systems The topics covered include but are not limited to Unmanned Aerial Ground Surface Underwater Systems Robotic Autonomous Control Navigation and Positioning Architecture Energy and Task Planning and Effectiveness Evaluation Technologies Artificial Intelligence Algorithm Bionic Technology and Its Application in Unmanned Systems The papers showcased here share the latest findings on Unmanned Systems Robotics Automation Intelligent Systems Control Systems Integrated Networks Modeling and Simulation It makes the book a valuable asset for researchers engineers and university students alike Radar Principles with Applications to Tracking Systems Philip L. Eye Tracking & Detection of Deception Fernando Mendes de Barros,2018 The Concealed Information Test CIT is one of the most scientifically supported techniques of lie detection to date and it is specifically used for detecting individuals knowledge of crime details Advancements in the field of eye tracking research also indicate that pupillometry data could be of value for detection of deception techniques Recognising a research gap regarding the potential benefits of using eye tracking data for detection of concealed information in CIT studies the present study investigated whether eye fixation duration i e dwell time and average pupil size APS could predict individuals attempts to conceal information in a CIT procedure that used mock crime photographs as its primary source of test stimuli A total of 30 participants took part in a mock crime CIT experiment and were assigned to two groups guilty and innocent Guilty participants were required to enact a mock theft whereas innocent participants performed an observation task The CIT had two types of question trials critical and control relevant trials Critical trials presented the simultaneous display of crime relevant and crime irrelevant photographs and correct answers could only be known to guilty participants In control relevant trials the correct answers could only be known to innocent participants and they showed the simultaneous display of control relevant and control irrelevant photographs Results revealed that guilty participants displayed significant increases in APS when responding to both critical and control relevant trials in comparison to innocent participants Moreover neither guilty nor innocent participants displayed significant differences in APS between responses towards relevant and irrelevant photographs Regarding dwell time responses results showed that only guilty participants presented significant decreases in mean dwell time towards relevant i e known photographs compared with irrelevant photographs in critical trials By contrast innocent participants displayed significant increase in dwell time towards relevant photographs in comparison to irrelevant photographs in control relevant trials whereas guilty participants presented significant decrease in dwell time towards relevant photos in these trials These results suggest that guilty participants engaged in avoidance behaviour during the CIT examination and detection of participants attempts to conceal information is possible by targeting guilty participants eye movement patterns Moreover data from innocent participants suggest that innocent participants are less likely to engage in avoidance behaviour during CIT examinations and they may display an orienting response towards known test stimuli instead

Using Eye-tracking to Understand User Behavior in Deception Detection System Interaction Prashanth Kumar Lakkapragada,2016 This research presents the analysis of data collected using eye tracking devices on user interaction with a deception detection system The

differences between two groups of subjects namely Innocent and Guilty were compared where Innocent subjects did not carry any explosive and hence had nothing to hide in declaring objects that they were carrying whereas Guilty subjects had to lie to deceive the system The results indicate that there is no significant difference in pupil dilation between the Innocent and Guilty subjects However the amount of fixations on the empty spaces of slides containing an explosive image can be used to identify Innocent versus Guilty subjects where subjects in the Guilty condition were more likely than subjects in the Innocent condition to focus on the empty spaces between the images of objects on those slides Abstract page iii
