Sperflage Macomber, 2003 Understanding Intermediate Algebra Lewis Hirsch, Arthur Goodman, 2002 Helping students grasp the why of algebra through patient explanations Hirsch and Goodman gradually build students confidence without sacrificing rigor To help students move beyond the how of algebra computational proficiency to the why conceptual understanding the authors introduce topics at an elementary level and return to them at increasing levels of complexity Their gradual introduction of concepts rules and definitions through a wealth of illustrative examples both numerical and algebraic helps students compare and contrast related ideas and understand the sometimes subtle distinctions among a variety of situations This author team carefully prepares students to succeed in higher level mathematics Understanding Elementary Algebra Arthur Goodman, Lewis Hirsch, 1990 **Acquisition of Complex Arithmetic Skills and Higher-Order Mathematics Concepts** David C. Geary, Daniel B. Berch, Robert Ochsendorf, Kathleen Mann Koepke, 2017-08-01 Acquisition of Complex Arithmetic Skills and Higher Order Mathematics Concepts focuses on typical and atypical learning of complex arithmetic skills and higher order math concepts As part of the series Mathematical Cognition and Learning this volume covers recent advances in the understanding of children's developing competencies with whole number arithmetic fractions and rational numbers Each chapter covers these topics from multiple perspectives including genetic disorders cognition instruction and neural networks Covers innovative measures and recent methodological advances in mathematical thinking and learning Contains contributions that improve instruction and education in these domains Informs policy aimed at increasing the level of mathematical proficiency in the general public Mathematics Education Lyn D. English, Graeme S. Halford, 2012-12-06 To define better techniques of mathematics education this book combines a knowledge of cognitive science with mathematics curriculum theory and research The concept of the human reasoning process has been changed fundamentally by cognitive science in the last two decades The role of memory retrieval domain specific and domain general skills analogy and mental models is better understood now than previously The authors believe that cognitive science provides the most accurate account thus far of the actual processes that people use in mathematics and offers the best potential for genuine increases in

efficiency As such they suggest that a cognitive science approach enables constructivist ideas to be analyzed and further developed in the search for greater understanding of children s mathematical learning Not simply an application of cognitive science however this book provides a new perspective on mathematics education by examining the nature of mathematical concepts and processes how and why they are taught why certain approaches appear more effective than others and how children might be assisted to become more mathematically powerful The authors use recent theories of analogy and knowledge representation combined with research on teaching practice to find ways of helping children form links and correspondences between different concepts so as to overcome problems associated with fragmented knowledge In so doing they have capitalized on new insights into the values and limitations of using concrete teaching aids which can be analyzed in terms of analogy theory In addition to addressing the role of understanding the authors have analyzed skill acquisition models in terms of their implications for the development of mathematical competence They place strong emphasis on the development of students mathematical reasoning and problem solving skills to promote flexible use of knowledge The book further demonstrates how children have a number of general problem solving skills at their disposal which they can apply independently to the solution of novel problems resulting in the enhancement of their mathematical knowledge *Everyday Algebra for the Ninth School Year* Harry Clark Barber,1926 **Directory of Awards** National Science Foundation (U.S.).
