What is cerebrospinal fluid?

Cerebrospinal fluid (CSF) is a fluid present in the ventricles of the brain, cisterns of the brain, and subarachnoid space. It acts as a shock absorber for the brain, provides nutrients, and removes waste. It is produced in the choroid plexus of the ventricles and circulates through the ventricular system and subarachnoid space.

What is the central nervous system?

The central nervous system (CNS) consists of the brain and spinal cord. It is responsible for processing and coordinating sensory and motor information. The brain is divided into the cerebrum, cerebellum, and brainstem. The spinal cord is a long, thin, tube-like structure that runs from the base of the brain down to the lower back. It is composed of a series of vertebrae and is surrounded by a protective layer of meninges.

What are synaptic connections?

Synaptic connections are the points where neurons meet and communicate. They are formed by the axon terminals of one neuron and the dendrites of another neuron. Synaptic connections are essential for the transmission of electrical signals between neurons.

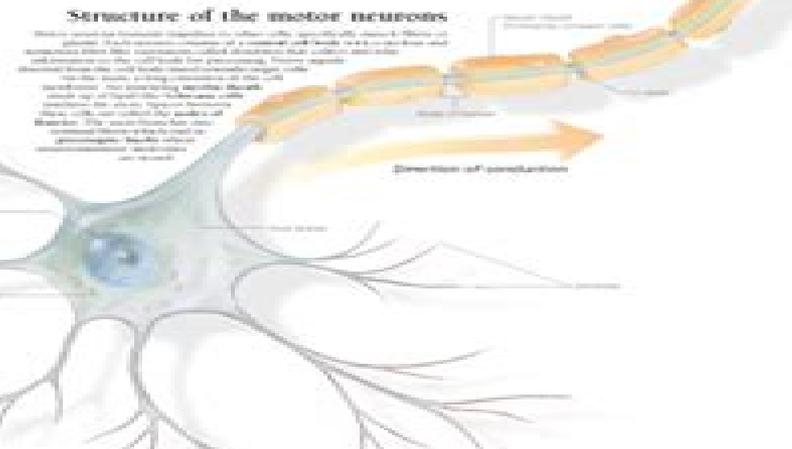

The spinal cord and nerves

The spinal cord is a long, thin, tube-like structure that runs from the base of the brain down to the lower back. It is composed of a series of vertebrae and is surrounded by a protective layer of meninges. The spinal cord is responsible for processing and coordinating sensory and motor information.

Neurological disorders

Changes in the normal function of the brain, spinal cord, or peripheral nerves can lead to a variety of neurological disorders. Some common examples include:

- Parkinson's disease:** A neurodegenerative disorder that affects the brain, leading to tremors, rigidity, and bradykinesia.
- Alzheimer's disease:** A neurodegenerative disorder that affects the brain, leading to memory loss and cognitive decline.
- Epilepsy:** A neurological disorder characterized by recurrent, unprovoked seizures.
- Stroke:** A neurological disorder caused by a disruption of blood flow to the brain, leading to brain tissue damage.
- Multiple sclerosis:** A neurological disorder characterized by the presence of lesions in the brain and spinal cord.
- Spina Bifida:** A congenital neurological disorder characterized by the incomplete development of the brain and spinal cord.
