

The Vascular System

What is the vascular system?

The vascular system is a network of blood vessels that transport blood throughout the body. It consists of the heart, arteries, and veins. The system is responsible for delivering oxygen and nutrients to the body's cells and removing waste products.

The heart

The heart is a muscular organ that pumps blood throughout the body. It consists of four chambers: the right and left atria and ventricles. The heart is located in the chest cavity, between the lungs.

Blood vessels

Blood vessels are the network of tubes that carry blood throughout the body. They are divided into arteries, veins, and capillaries. Arteries carry blood away from the heart, while veins carry blood back to the heart. Capillaries are the smallest blood vessels and are where the exchange of oxygen and nutrients occurs.

Importance of pressure

Blood pressure is the force exerted by the blood against the walls of the blood vessels. It is essential for the flow of blood through the vascular system. High blood pressure can damage the blood vessels and lead to heart disease, while low blood pressure can result in inadequate blood flow to the body's organs.

Arterial valve work

Arteries have the valve work to allow blood to flow towards the heart and away from the heart during backflow. In the diagram, arterial valves surrounding the heart control blood flow towards the heart. As the heart relaxes, the arterial valves close, preventing blood from flowing back.
