The Social Behavior of Animals Stuart J. Dimond,1970 **Social Behaviour in Animals** Niko Tinbergen,1965-10 HIS book is not intended as an exhaustive review T f facts I ts aim is rather the presentation of a biological approach to the phenomena of social behaviour This type of approach was revived by Lorenz s pioneer stnJies It is characterized by emphasis on the need for renewed and careful observation of the huge variety of social phenomena occurring in nature by emphasis on a balanced study of the three main biological problems unction causation evolution by emphasis on an appo priate sequence of description qualitative analysis quanti tative analysis and finally by emphasis on the need for continuous re synthesis The character of this approach combined with the limitations of space have determined this book s contents Limits of space led to the omission of a great deal of de scrip tion Thus Deegener s voluminous work on the multitude of types of animal aggregations has not been discussed Also the highly specialized states of social insects have not been treated in detail since there are excellent books dealing exclusively with them

Social Behaviour in Animals (Psychology Revivals) N.
