

# Sparse Matrices

- Lower triangular (?)
  - Only elements on or below diagonal may be nonzero
  - Ratio is  $n(n+1)/(2n^2) \sim 0.5$

These are structured sparse matrices. Nonzero elements are in a well-defined portion of the matrix.

*Complexity of Kronecker Operations on Sparse Matrices with Applications to the Solution of Markov Models* Institute for Computer Applications in Science and Engineering,1997 Abstract We present a systematic discussion of algorithms to multiply a vector by a matrix expressed as the Kronecker product of sparse matrices extending previous work in a unified notational framework Then we use our results to define new algorithms for the solution of large structured Markov models In addition to a comprehensive overview of existing approaches we give new results with respect to 1 managing certain types of state dependent behavior without incurring extra cost 2 supporting both Jacobi style and Gauss Seidel style methods by

appropriate multiplication algorithms 3 speeding up algorithms that consider probability vectors of size equal to the actual state space instead of the potential state space [Matlab](#) Will Chavez,2019-10-02 Many features of this book are designed to emphasize the proper way to write reliable MATLAB programs These features should serve a student well when he or she is first learning MATLAB and they should also be useful to the practitioner on the job They include 1 Emphasis on Top Down Design Methodology The book introduces a top down design methodology in Chapter 3 and uses it consistently throughout the rest of the book This methodology encourages a student to think about the proper design of a program before beginning to code It emphasizes the importance of clearly defining the problem to be solved and the required inputs and outputs before any other work is begun Once the problem has been properly defined it teaches the student to employ stepwise refinement to break the task down into successively smaller sub tasks and to implement the subtasks as separate subroutines or functions Finally it teaches the importance of testing at all stages of the process both unit testing of the component routines and exhaustive testing of the final product The formal design process taught by the book may be summarized as follows i Clearly state the problem that you are trying to solve ii Define the inputs required by the program and the outputs to be produced by the program iii Describe the algorithm that you intend to implement in the program This step involves top down design and stepwise decomposition using pseudocode or flow charts iv Turn the algorithm into MATLAB statements v Test the MATLAB program This step includes unit testing of specific functions as well as exhaustive testing of the final program with many different data sets 2 Emphasis on Functions The book emphasizes the use of functions to logically decompose tasks into smaller sub tasks It teaches the advantages of functions for data hiding It also emphasizes the importance of unit testing functions before they are combined into the final program In addition the book teaches about the common mistakes made with functions and how to avoid them 3 Emphasis on MATLAB Tools The book teaches the proper use of MATLAB s built in tools to make programming and debugging easier The tools covered include the Editor Debugger the Workspace Browser the Help Browser and GUI design tools **An Analysis of Sparse Matrix Storage Schemes** M.
