Toxicology A Case Oriented Approach:

Toxicology John Joseph Fenton, 2001-10-10 REAL LIFE CASES TUTORIAL QUESTIONS NARRATIVE HISTORY Intriguing anecdotal pedagogy like the alleged arsenical poisonings of Napoleon and President Taylor and the probable mercury overdose of Isaac Newton is one of the things that set *Toxicology A Case Oriented Approach* apart from other toxicology texts Based on an undergraduate graduate *Principles of Biochemical Toxicology* John A. Timbrell, 2008-11-18 This leading textbook in the field examines the mechanisms underlying toxicity particularly the events at the molecular level and the factors that determine and affect toxicity The new edition is updated to reflect the latest research into the biochemical basis of toxicology and the growing concerns over the adverse effects of drugs environmental ***Principles and Methods of Toxicology, Fifth Edition*** A. Wallace Hayes, 2007-09-25 Founded on the paradox that all things are poisons and the difference between poison and remedy is quantity the determination of safe dosage forms the base and focus of modern toxicology In order to make a sound determination there must be a working knowledge of the biologic mechanisms involved and of the methods employed to define these mechanisms While the vastness of the field and the rapid accumulation of data may preclude the possibility of absorbing and retaining more than a fraction of the available information a solid understanding of the underlying principles is essential Extensively revised and updated with four new chapters and an expanded glossary this fifth edition of the classic text *Principles and Methods of Toxicology* provides comprehensive coverage in a manageable and accessible format New topics include toxicoponomics plant and animal poisons information resources and non animal testing alternatives Emphasizing the cornerstones of toxicology people differ dose matters and things change the book begins with a review of the history of toxicology and followed by an explanation of basic toxicological principles agents that cause toxicity target organ toxicity and toxicological testing methods including many of the test protocols required to meet regulatory needs worldwide The book examines each method or procedure from the standpoint of technique and interpretation of data and discusses problems and pitfalls that may be associated with each The addition of several new authors allow for a broader and more diverse treatment of the ever changing and expanding field of toxicology Maintaining the high quality information and organizational framework that made the previous editions so successful *Principles and Methods of Toxicology Fifth Edition* continues to be a valuable resource for the advanced practitioner as well as the new disciple of toxicology ***Environmental Chemistry, Eighth Edition*** Stanley E. Manahan, 2004-08-26 *Environmental Chemistry Eighth Edition* builds on the same organizational structure validated in previous editions to systematically develop the principles tools and techniques of environmental chemistry to provide students and professionals with a clear understanding of the science and its applications Revised and updated since the publication of the best selling *Seventh Edition* this text continues to emphasize the major concepts essential to the practice of environmental science technology and chemistry while introducing the newest innovations to the field The author provides clear explanations to important concepts

such as the anthrosphere industrial ecosystems geochemistry aquatic chemistry and atmospheric chemistry including the study of ozone depleting chlorofluorocarbons The subject of industrial chemistry and energy resources is supported by pertinent topics in recycling and hazardous waste Several chapters review environmental biochemistry and toxicology and the final chapters describe analytical methods for measuring chemical and biological waste New features in this edition include enhanced coverage of chemical fate and transport industrial ecology particularly how it is integrated with green chemistry conservation principles and recent accomplishments in sustainable chemical science and technology a new chapter addressing terrorism and threats to the environment and the use of real world examples
