Automated Deduction in Equational Logic and Cubic Curves William McCune, R. Padmanabhan, 1996-06-12 This monograph is the result of the cooperation of a mathematician working in universal algebra and geometry and a computer scientist working in automated deduction who succeeded in employing the theorem prover Otter for proving first order theorems from mathematics and then intensified their joint effort. Mathematicians will find many new results from equational logic universal algebra and algebraic geometry and benefit from the state of the art outline of the capabilities of automated deduction techniques. Computer scientists will find a large and varied source of theorems and problems that will be useful in designing and evaluating automated theorem proving systems and strategies.

Strongly Correlated Fermions and Bosons in Low-Dimensional Disordered Systems Igor V. Lerner, Boris L. Al'tshuler, Vladimir I. Fal'ko, Thierry Giamarchi, 2002-07-31 The physics of strongly correlated fermions and bosons in a disordered environment and confined geometries is at the focus of intense experimental and theoretical research efforts. Advances in material technology and in low temperature techniques during the last few years led to the discoveries of new physical phenomena of atomic gases and a possible metal phenomena including Bose condensation insulator transition in two dimensional high mobility electron structures. Situations where the electronic system is so dominated by interactions that the old concepts of a Fermi liquid do not necessarily make a good starting point are now routinely achieved. This is particularly true in the theory of low dimensional systems such as carbon nanotubes or in two dimensional electron gases in high mobility devices where the electrons can form a variety of new structures. In many of these systems disorder is an unavoidable complication and leads to a host of rich physical phenomena. This has pushed the forefront of fundamental research in condensed matter towards the edge where the interplay between many body correlations and quantum interference enhanced by disorder has become the key to the understanding of novel phenomena.

Connectionist, Statistical and Symbolic Approaches to Learning for Natural Language Processing Stefan Wermter, Ellen Riloff, Gabriele Scheler, 1996-03-15 This book is based on the workshop on New Approaches to Learning for Natural Language Processing held in conjunction with the International Joint Conference on Artificial Intelligence IJCAI 95 in Montreal Canada in August 1995. Most of the 32 papers included in the book are revised selected workshop presentations; some papers were individually solicited from members of the workshop program committee to give the book an overall completeness. Also included and written with the novice reader in mind is a comprehensive introductory survey by the volume editors. The volume presents the state of the art in the most promising current approaches to learning for NLP and is thus compulsory reading for researchers in the field or for anyone applying the new techniques to challenging real world NLP problems.

Time Structures Elzbieta Hajnicz, 1996-03-20 The notion of time plays an important role in modern science. In computer science and artificial intelligence the parameter of time is of particular importance e.g. for planning robot activity, natural language processing and time varying scene analysis. This work investigates the

relationship between classic first order theories of point and interval based time structures modal logics of corresponding structures and their algorithmic representations To make this relationship complete a formalisation of Allen s famous algorithm applicable to various structures of time is presented along with its translation to modal logics All in all the book is a competent and comprehensive analysis of logical descriptions and algorithmic representations of time structures

Integrity Primitives for Secure Information Systems Antoon Bosselaers,Bart Preneel,2005-06-30 This manual documents the outcome of the EC sponsored project RACE Integrity Primitives Evaluation R1040 RIPE This project is a huge joint 350 man month project conducted by 16 leading European security experts This book offers expert advice to professionals seeking to secure information systems by applying up to date cryptographic techniques The core of this volume is a detailed integrity primitives portfolio recommendation Among the issues addressed are security services integrity mechanisms data origin authentication entity authentication access control data integrity non repudiation signatures and key exchange

Communication and Cooperation in Agent Systems Afsaneh Haddadi,1996-04-17 This book is devoted to the design and analysis of techniques enabling intelligent and dynamic cooperation and communication among agents in a distributed environment A flexible theoretical formalism is developed in detail and it is demonstrated how this approach can be used for the design of agent architectures in practice The formal part of this work is based on a variant of the BDI logic introduced by Georgeff and Rao This book for the first time outlines this formalism in some depth The most important practical benefit provided is the concept of cooperation protocols allowing the representation of various methods of cooperation and possible patterns of dialogue

Trends in Natural Language Generation - An Artificial Intelligence Perspective Giovanni Adorni,Michael Zock,1996-03-13 This proceedings volume gives an up to date overview of the most recent results in the field of plant molecular response to environmental constraints especially heat cold water drought salt or light It centers on molecular approaches in understanding the bases of plant tolerance to physical stresses links among different environmental stresses and the manipulation of gene expression by recombinant DNA technology to obtain tolerant transgenic plants
