Valuing Climate Change:

Valuing Climate Change Samuel Fankhauser, 2017-06-30 Within only a few years global warming has emerged from scientific speculation into an environmental threat of worldwide concern Yet the scientific community remains uncertain as to the long term trends and effects of climate change and this uncertainty has been seized on as justification for inaction by an international community reluctant to bear the costs of policies to reduce greenhouse gas emissions *Valuing Climate Change* presents concrete economic evidence of the need for action Fankhauser assesses the costs of a doubling of GHG emissions to be a significant percentage of gross world product a figure which he then compares to the costs of reducing emissions In his comparison he looks at regional as well as global estimates of damage and takes account of the non climate change benefits of GHG reductions such as a switch in the energy sector to cleaner technologies or renewable fuels and the impacts on transport with reduced congestion and improved air quality It is clear that the stakes are high and Fankhauser believes that tougher targets may be needed than those set out in the Framework Convention on Climate Change He assesses the optimum policy responses to GHG reduction the likely instruments for achieving it and the potential for international cooperation in dealing with the problems This is a major contribution to the rapidly changing debate on global warming

Valuing Climate Change Mitigation Sonia Akter, Jeff Bennett, 2012 This enriching book presents a holistic overview of climate change uncertainty and offers a number of pathways that could be used to account for such uncertainties in the stated preference valuation research It shows that uncertainty plays an important role in determining the values of climate change mitigation benefits and as the authors say If this uncertainty remains unaccounted for there is a potential danger that the estimated economic values will misrepresent social preferences for public policy interventions to manage environmental externalities *Valuing Climate Change Mitigation* discusses the role of uncertainty in valuing the benefits of climate change mitigation policies using contingent valuation and choice experiment techniques It treats climate change using three dimensions of uncertainty scenario policy and preference Conceptual frameworks are advanced to account simultaneously for these various dimensions of uncertainty The authors then explore the impact of introducing these uncertainties into benefit estimates for the Australian Carbon Pollution Reduction Scheme The authors present frameworks to account for multiple uncertainty in environmental decision analysis that will prove invaluable for academics and students in the fields of environmental economics and management Policy makers will also gain invaluable methodological insight

Valuing Climate Damages National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Environmental Change and Society, Committee on Assessing Approaches to Updating the Social Cost of Carbon, 2017-05-23 The social cost of carbon SC CO₂ is an economic metric intended to provide a comprehensive estimate of the net damages that is the monetized value of the net impacts both negative and positive from the global climate change that results from a small 1 metric ton increase in carbon dioxide CO₂ emissions Under Executive Orders regarding

regulatory impact analysis and as required by a court ruling the U S government has since 2008 used estimates of the SC CO₂ in federal rulemakings to value the costs and benefits associated with changes in CO₂ emissions In 2010 the Interagency Working Group on the Social Cost of Greenhouse Gases IWG developed a methodology for estimating the SC CO₂ across a range of assumptions about future socioeconomic and physical earth systems **Valuing Climate Changes** examines potential approaches along with their relative merits and challenges for a comprehensive update to the current methodology This publication also recommends near and longer term research priorities to ensure that the SC CO₂ estimates reflect the best available science **Valuing Climate Change** Samuel Fankhauser,2013-10-11 Within only a few years global warming has emerged from scientific speculation into an environmental threat of worldwide concern Yet the scientific community remains uncertain as to the long term trends and effects of climate change and this uncertainty has been seized on as justification for inaction by an international community reluctant to bear the costs of policies to reduce greenhouse gas emissions **Valuing Climate Change** presents concrete economic evidence of the need for action Fankhauser assesses the costs of a doubling of GHG emissions to be a significant percentage of gross world product a figure which he then compares to the costs of reducing emissions In his comparison he looks at regional as well as global estimates of damage and takes account of the non climate change benefits of GHG reductions such as a switch in the energy sector to cleaner technologies or renewable fuels and the impacts on transport with reduced congestion and improved air quality It is clear that the stakes are high and Fankhauser believes that tougher targets may be needed than those set out in the Framework Convention on Climate Change He assesses the optimum policy responses to GHG reduction the likely instruments for achieving it and the potential for international cooperation in dealing with the problems This is a major contribution to the rapidly changing debate on global warming **Valuing Climate Change Mitigation** Sonia Akter,Jeff Bennett,2012-01-01 This enriching book presents a holistic overview of climate change uncertainty and offers a number of pathways that could be used to account for such uncertainties in the stated preference valuation research It shows that uncertainty plays an important role in determining the values of climate change mitigation benefits and as the authors say If this uncertainty remains unaccounted for there is a potential danger that the estimated economic values will misrepresent social preferences for public policy interventions to manage environmental externalities **Valuing Climate Change Mitigation** discusses the role of uncertainty in valuing the benefits of climate change mitigation policies using contingent valuation and choice experiments techniques It treats climate change using three dimensions of uncertainty scenario policy and preference Conceptual frameworks are advanced to account simultaneously for these various dimensions of uncertainty The authors then explore the impact of introducing these uncertainties into benefit estimates for the Australian Carbon Pollutions Reduction Scheme The authors present frameworks to account for multiple uncertainty in environmental decision analysis that will prove invaluable for academics and students in the fields of environmental economics and management Policy makers will also gain

invaluable methodological insight **Valuing Excess Deaths Caused by Climate Change** R. Daniel Bressler,2022 Valuing deaths caused by climate change in Benefit Cost Analysis BCA is complex and controversial having caused disagreement and acrimony in past high profile settings Furthermore it is of first order consequence to the value of the social cost of carbon SCC Despite this the underlying considerations remain under analyzed We address this by assessing the theory behind different approaches to BCA and by evaluating how they fare when applied to global externalities like climate change The pure Kaldor Hicks approach to BCA measuring costs in market dollars unadjusted for diminishing marginal utility and valuing premature deaths in rich areas more than poor areas relies on assumptions that are debated in domestic contexts but as we show clearly do not hold in the context of climate change We show that this approach is equivalent to defining a Negishi weighted social welfare function Furthermore we show that if costs are measured in purchasing power parity adjusted money as is typical for the SCC then the Kaldor Hicks potential compensation criterion no longer necessarily holds We conclude that the first best BCA approach in the climate context is welfare weighting This approach accounts for diminishing marginal utility using empirical estimates for the curvature of the utility function and it better captures what a social planner naturally cares about real net benefits and the welfare people get from those net benefits The current U S practice identical to the pure Kaldor Hicks approach except that it gives a uniform population average value to all premature deaths is preferred over the pure Kaldor Hicks approach because it implicitly welfare weights premature mortality costs However the fully welfare weighted approach is first best because it accounts for diminishing marginal utility across all costs not just premature mortality risk Valuing the Environment in Developing Countries David Pearce,David William Pearce,Corin Pearce,Charles Palmer,2002 The substantial and growing interest in the monetary valuation of preferences for environmental improvement and against environmental damage has prompted a demand for case studies illustrating methodologies and applications of valuation techniques In this book the first of two volumes the authors provide detailed case studies of valuation techniques that have been used in developing countries They demonstrate that valuation works and that it can yield significant insights into policy relevant issues regarding conservation and economic development The authors address a whole range of environmental issues under the broad themes of water and air quality biological diversity and forest functions The economic approaches covered include contingent valuation hedonic property prices travel cost methodologies and benefits transfer They also go on to look at the idea of extending national accounts to reflect changes in environmental assets Examples of the varied and interesting case studies include valuing improvements to sanitation in Malaysia the value of visits to game parks in South Africa and tropical forest values in Mexico They highlight how valuation techniques can be applied often with limited resources to critical development issues Academics and practitioners of environmental economics will draw great value from this unique and original work as will the many multilateral and bilateral aid agencies The book will also prove a valuable addition to graduate and undergraduate courses in environmental economics

Valuing Plastic Julie Raynaud,2014 The objective of this report is to help companies manage the opportunities and risks associated with plastic use It articulates the business case for companies to improve their measurement disclosure and management of plastic use in their designs operations and supply chains In order to provide a sense of scale the report sets out to quantify the physical impacts of plastic use translated into monetary terms This metric can be seen as the current value at risk to a company should these external impacts be realised internally through mechanisms like strengthened regulation loss of market share or increased price of raw materials and energy This metric can also be used to help understand the magnitude of the opportunities and the tangible benefits to stakeholders including shareholders of using plastic in an environmentally sustainable way Economic Valuation with Stated Preference Techniques Ian Bateman,2002 This manual offers a detailed up to date explanation of how to carry out stated preference techniques The techniques use surveys to ask individuals how much they would be willing to pay or willing to accept in compensation for gains or losses of non market goods and services Applications of the technique include changes in air and water quality noise nuisance health care risk recorded heritage cultural assets habitats Landscape and so on It shows how to choose the most appropriate technique and how to design the questionnaires Detailed advice on econometric analysis is provided as well as explanation of the pitfalls that need to be avoided Assessing Climate Change Risks Anthony C. Fisher,W. Michael Hanemann,1992

The Economics of Climate Change Mitigation Policies and Options for Global Action beyond 2012 OECD,2009-09-28 Against the background of a projected doubling of world greenhouse gas emissions by mid century this book explores feasible ways to abate them at least cost

Guidance Manual on Value Transfer Methods for Ecosystem Services Luke Brander,2015 The purpose of this guidance manual is to show how the value of ecosystem services can be estimated and incorporated into decision making Specifically it is designed to help a broad audience of conservation managers government officials private sector managers NGOs and statisticians to understand the available information on the values of ecosystem services and how this information can be transferred to inform the decisions that they make It explains why you would undertake a study who should be involved how to implement the study and how to use the results The development of this guidance manual was funded by the United Nations Environment Programme

Measuring the Impacts from Climate Change Robert O. Mendelsohn,2001 *The Finnish Research Programme on Climate Change* Jaana Roos,1996

The Importance of Trade for the Ratification of the 1992 Climate Change Convention Per G. Fredriksson,Noel Gaston,1999

Climate Change Michael A. Toman,Brent L. Sohngen,2004 Over the years a large and growing literature on the economics of climate change has developed Within this volume the contributors have included a wide range of journal essays that consider the impact of climate change on specific sectors goods and services the costs and benefits of greenhouse gas GHG mitigation and policy design for mitigation including both domestic instruments and issues related to international agreements The Benefits of Climate Change Policies Organisation for

Economic Co-operation and Development, 2004-12-20 This publication provides an overview of the state of the art in assessment of the global benefits of climate change policies It includes recent analyses and viewpoints from well known scientists and policy analysts Publisher s summary The Stated Preference Approach to Environmental Valuation Richard T. Carson, 2007 There is a truly enormous literature on using stated preference information to place a monetary value on environmental amenities This three volume set provides the key papers for understanding the historical development of contingent valuation its theoretical and statistical foundations and the major controversies It also contains representative papers covering all of the major application areas in environmental valuation **Man-Made Climate Change** Olav Hohmeyer, Klaus Rennings, 1999 As the Kyoto conference of the parties on the United Nations Framework Convention on Climate Change once again underscored man made climate change has become one of the major challenges to our generation and many generations to come Since scientific evidence on climate change can be seen as increasingly reliable the focus of our attention has to turn more and more to the question of foreseeable damages and to possibilities to prevent and mitigate climate change In other words we need to analyse the economic aspects of man made climate change and the policy options to prevent its most severe impacts This book reports on the findings of an international workshop on these aspects of global climate change It was organised by the Centre for European Economic Research ZEW in Mannheim Germany on March 6th and 7th 1997 In the light of the ongoing international policy making process on climate change we decided to publish the report after the Kyoto conference from December 1st to 10th 1997 to include the results of the conference which emphasise the importance of economic aspects and economic policy options when it comes to addressing the problem of man made climate change Thus this book went to press in February 1998 the moment we received the official version of the Kyoto Protocol which is reproduced in the annex **Climate Change 1995**, 1995
