   Data-Driven Modeling Using Spherical Self-Organizing Feature Maps Archana Sangole,2006-04-28 Researchers and data analysts are increasingly relying on graphical tools to assist them in modeling their data generating their hypotheses and gaining deeper insights on their experimentally acquired data Recent advances in technology have made available more improved and novel modeling and analysis media that facilitate intuitive task driven exploratory analysis and manipulation of the displayed graphical representations In order to utilize these emerging technologies researchers must be able to transform experimentally acquired data vectors into a visual form or secondary representation that has a simple structure and is easily transferable into the media As well it is essential that it can be modified or manipulated within the display environment This thesis presents a data driven modeling technique that utilizes the basic learning strategy of an unsupervised clustering algorithm called the self organizing feature map to adaptively learn topological associations inherent in the data and preserve them within the topology imposed by its predefined spherical lattice thereby transforming the data into a 3D tessellated form The tessellated graphical forms originate from a sphere thereby simplifying the process of

computing its transformation parameters on re orientation within an interactive task driven graphical display medium A variety of data sets including six sets of scattered 3D coordinate data chaotic attractor data the more commonly used Fisher s Iris flower data medical numeric data geographic and environmental data are used to illustrate the data driven modeling and visualization mechanism The modeling algorithm is first applied to scattered 3D coordinate data to understand the influence of the spherical topology on data organization Two cases are examined one in which the integrity of the spherical lattice is maintained during learning and the second in which the inter node connections in the spherical lattice are adaptively changed during learning In the analysis scattered coordinate data of freeform objects with topology equivalent to a sphere and those whose topology is not equivalent to a sphere are used Experiments demonstrate that it is possible to get reasonably good results with the degree of resemblance determined by an average of the total normalized error measure ranging from 6 2x10 5 1 1x10 3 The experimental analysis using scattered coordinate data facilitates an understanding of the algorithm and provides evidence of the topology preserving capability of the spherical self organizing feature map The algorithm is later implemented using abstract seemingly random numeric data Unlike in the case of 3D coordinate data wherein the SOFM lattice is in the same coordinate frame domain as the input vectors the numeric data is abstract The criterion for deforming the spherical lattice is determined using mathematical and statistical functions as measures of information that are tailored to reflect some aspect of meaningful tangible inter vector relationships or associations embedded in the spatial data that reveal some physical aspect of the data These measures are largely application dependent and need to be defined by the data analyst or an expert Interpretation of the resulting 3D tessellated graphical representation or form glyph is more complex and task dependent as compared to that of scattered coordinate data Very simple measures are used in this analysis in order to facilitate discussion of the underlying mechanism to transform abstract numeric data into 3D graphical forms or glyphs Several data sets are used in the analysis to illustrate how novel characteristics hidden in the data and not easily apparent in the string of numbers can be reflected via 3D graphical forms The proposed data driven modeling approach provides a viable mechanism to generate 3D tessellated representations of data that can be easily transferred to a graphical modeling and ana **Advances in Visual Computing** George Bebis,Richard Boyle,Bahram Parvin,Darko Koracin,Ryan McMahan,Jason Jerald,Hui Zhang,Steven Drucker,Kambhamettu Chandra,El Choubassi Maha,Zhigang Deng,Mark Carlson,2014-12-02 The two volume set LNCS 8887 and 8888 constitutes the refereed proceedings of the 10th International Symposium on Visual Computing ISVC 2014 held in Las Vegas NV USA The 74 revised full papers and 55 poster papers presented together with 39 special track papers were carefully reviewed and selected from more than 280 submissions The papers are organized in topical sections Part I LNCS 8887 comprises computational bioimaging computer graphics motion tracking feature extraction and matching segmentation visualization mapping modeling and surface reconstruction unmanned autonomous systems medical imaging tracking for human activity monitoring

intelligent transportation systems visual perception and robotic systems Part II LNCS 8888 comprises topics such as computational bioimaging recognition computer vision applications face processing and recognition virtual reality and the poster sessions   Geographical Information '97 Stuart Hodgson,Massimo Rumor,JanJaap Harts,1997 Geographical Information is essential for the layout planning and management of space and involves taxation cadastral data bases environmental policy water management maintenance and protection of pipeline systems terrain modelling and the making of maps The third European conference brought together some 300 speakers and authors from academia industry and government The resulting monumental work is representative for the state of the art of knowledge and information on Geographical Information   **Applications of Virtual Reality** Cecília Sik Lányi,2012-05-02 Information Technology is growing rapidly With the birth of high resolution graphics high speed computing and user interaction devices Virtual Reality has emerged as a major new technology in the mid 90es last century Virtual Reality technology is currently used in a broad range of applications The best known are games movies simulations therapy From a manufacturing standpoint there are some attractive applications including training education collaborative work and learning This book provides an up to date discussion of the current research in Virtual Reality and its applications It describes the current Virtual Reality state of the art and points out many areas where there is still work to be done We have chosen certain areas to cover in this book which we believe will have potential significant impact on Virtual Reality and its applications This book provides a definitive resource for wide variety of people including academicians designers developers educators engineers practitioners researchers and graduate students   **Multimodal Studies** Kay O'Halloran,Bradley Smith,2012-05-22 The phenomenon of multimodality has as Jewitt observes generated interest across many disciplines against the backdrop of considerable social change Contemporary societies are grappling with the social implications of the rapid increase in sophistication and range of multimodal practices particularly within interactive digital media so that the study of multimodality also becomes essential within an increasing range of practical domains As a result of this increasing interest in multimodality scholars teachers and practitioners are on the one hand uncovering many different issues arising from its study such as those of theory and methodology while also exploring multimodality within an increasing range of domains Such an increase and range of interest in multimodality heralds the emergence of a distinct multimodal studies field as both the mapping of a domain of enquiry and as the site of the development of theories descriptions and methodologies specific to and adapted for the study of multimodality The present volume presents a range of works by an impressive international roster of contributors who both explore issues arising from the study of multimodality and explore the scope of this emerging field within specific domains of multimodal phenomena Contributors aim to show that each individual work and works in general within multimodal studies represent a dialectic or complementarity between the exploration of issues of general significance to multimodal studies and the exploration of specific domains of multimodality while characterizing specific works as tending to

some degree towards one or other of these main areas of focus Such a characterization is seen as part of a move towards the identification and thus development of a distinct field of multimodal studies **Mathematical Foundations of Advanced Informatics** Bernhard Steffen,Oliver Rüthing,Michael Huth,2018-03-20 The books in this trilogy capture the foundational core of advanced informatics The authors make the foundations accessible enabling students to become effective problem solvers This first volume establishes the inductive approach as a fundamental principle for system and domain analysis After a brief introduction to the elementary mathematical structures such as sets propositional logic relations and functions the authors focus on the separation between syntax representation and semantics meaning and on the advantages of the consistent and persistent use of inductive definitions They identify compositionality as a feature that not only acts as a foundation for algebraic proofs but also as a key for more general scalability of modeling and analysis A core principle throughout is invariance which the authors consider a key for the mastery of change whether in the form of extensions transformations or abstractions This textbook is suitable for undergraduate and graduate courses in computer science and for self study Most chapters contain exercises and the content has been class tested over many years in various universities *Visual Computing* Tosiyasu L.
