Space Time Crime:

Space, Time, and Crime Kim Michelle Lersch, 2007 The second edition includes updates of the material in each chapter The reader is provided even more real world examples from the field making the material more concrete Additionally extensive sections that address temporal aspects of criminal events including the concept of time geography have been added Interest in the spatial distribution of crime and criminals has experienced a virtual explosion over the past several years In Space Time and Crime Lersch provides an overview of the various theoretical explanations crime control policies and practical investigative tools used to identify high crime places spaces and times Throughout the text Lersch strives to provide a highly readable informative discussion of the important issues surrounding the geography of crime providing real world examples as well as illustrations from previously published research Space Time and Crime provides a basic overview of the more popular theories that have been used to explain the concentration of crime in certain places and times Each theory is carefully and clearly developed from its historical roots to contemporary applications with solid research cited throughout the discussions The reader is then moved from theory into practice where a summary and critique of a number of various theoretically driven practical policy applications are presented The basic elements of crime analysis and crime mapping both very popular crime fighting tools for police agencies and place managers are presented Finally the book closes with a strong Marxist based critique of the various theories policies and tools leaving the reader with some troubling questions to ponder This book includes sections on a number of the more exciting and controversial issues facing criminal justice today including community policing problem oriented policing crime prevention through environmental design CPTED situational crime prevention the COMPSTAT model for managing police resources identifying and controlling hot spots crime displacement and other ethical issues surrounding crime prevention and environmental justice

Artificial Crime Analysis Systems: Using Computer Simulations and Geographic Information Systems Liu, Lin, Eck, John, 2008-01-31 In the last decade there has been a phenomenal growth in interest in crime pattern analysis Geographic information systems are now widely used in urban police agencies throughout industrial nations With this scholarly interest in understanding crime patterns has grown considerably Artificial Crime Analysis Systems Using Computer Simulations and Geographic Information Systems discusses leading research on the use of computer simulation of crime patterns to reveal hidden processes of urban crimes taking an interdisciplinary approach by combining criminology computer simulation and geographic information systems into one comprehensive resource

Breaking Rules: The Social and Situational Dynamics of Young People's Urban Crime Per-Olof H. Wikström, 2012-05-24 Breaking new ground in the study of crime in urban environments Breaking Rules The Social and Situational Dynamics of Young People s Urban Crime examines the findings theoretical basis and new methodology of The Peterborough Adolescent and Young Adult Development Study PADS This major longitudinal study investigates the role of the social environment on crime causation involving a cohort of 700 young people from the age of 12

A particular aim of PADS is to employ a new theory known as Situational Action Theory as well as the innovative methodology of econometrics combined with space time budgets to improve the study of young people's offending and its changes. By reviewing the current literature and analysing the theoretical and methodological problems of previous research, the book explains how Situational Action Theory can help overcome central problems in criminological theorising. Using this new and innovative framework, it presents an analysis of the urban structure of Peterborough and its correlation to the differences in social life found in that area. The variations in the urban environment are examined in terms of crime victimization and fear of crime, and a detailed examination of young persons' crime and its spatial patterns is offered through the unique space-time budget data collected within PADS that enables analyses of young people, their movements, and crime involvement. With implications for policy and prevention as well as being the first study of its kind, this book should be of great interest to policy makers and practitioners interested in issues of urban environments as well as those studying crime in the urban environment and the role of the social environment in crime causation.

Crime Modeling and Mapping Using Geospatial Technologies Michael Leitner, 2013-01-19. Recent years in North America have seen a rapid development in the area of crime analysis and mapping using Geographic Information Systems (GIS) technology. In 1996, the US National Institute of Justice (NIJ) established the crime mapping research center (CMRC) to promote research, evaluation, development, and dissemination of GIS technology. The long-term goal is to develop a fully functional Crime Analysis System (CAS) with standardized data collection and reporting mechanisms, tools for spatial and temporal analysis, visualization of data, and much more. Among the drawbacks of current crime analysis systems is their lack of tools for spatial analysis. For this reason, spatial analysts should research which current analysis techniques or variations of such techniques that have been already successfully applied to other areas, e.g., epidemiology, location allocation analysis, etc., can also be employed to the spatial analysis of crime data. This book presents a few of those cases.

[Spatiotemporal Analytics](#) Jay Lee, 2023-03-17. This book introduces readers to spatiotemporal analytics that are extended from spatial statistics. Spatiotemporal analytics help analysts to quantitatively recognize and evaluate the spatial patterns and their temporal trends of a set of geographic events or objects. Spatiotemporal analyses are very important in geography, environmental sciences, economy, and many other domains. Spatiotemporal Analytics explains in very simple terms the concepts of spatiotemporal data and statistics theories and methods used. Each chapter introduces a case study as an example application for an in-depth learning process. The software used and the codes provided enable readers not only to learn statistics but also to use them effectively in their projects. Provides a comprehensive understanding of spatiotemporal analytics to readers with minimum knowledge in statistics. Written in simple, understandable language with step-by-step instructions. Includes numerous examples for all theories and

methods explained in the book covering a wide range of applications from different disciplines Each application includes a software code needed to follow the instructions Each chapter also has a set of prepared PowerPoint slides to help spatiotemporal analytics instructors explain the content Undergraduate and graduate students who use Geographic Information Systems or study Geographical Information Science will find this book useful The subject matter is also pertinent to an array of disciplines such as agriculture anthropology archaeology architecture biology business administration and management civic engineering criminal justice epidemiology geography geology marketing political science and public health
