Visual Modeling Technique:

Embedded Systems -- Modeling, Technology, and Applications Günter Hommel, Sheng Huanye, 2006-08-05 The International Workshop on Embedded Systems Modeling Technology and Applications is the seventh in a successful series of workshops that were established by Shanghai Jiao Tong University and Technische Universität Berlin. The goal of those workshops is to bring together researchers from both universities in order to present research results to an international community. The series of workshops started in 1990 with the International Workshop on Artificial Intelligence and was continued with the International Workshop on Advanced Software Technology in 1994. Both workshops have been hosted by Shanghai Jiao Tong University. In 1998 the third workshop took place in Berlin. This International Workshop on Communication Based Systems was essentially based on results from the Graduiertenkolleg on Communication Based Systems that was funded by the German Research Society DFG from 1991 to 2000. The fourth International Workshop on Robotics and its Applications was held in Shanghai in 2000. The fifth International Workshop on The Internet Challenge Technology and Applications was hosted by TU Berlin in 2002. The sixth International Workshop on Human Interaction with Machines was hosted by Shanghai Jiao Tong University. The subject of this year's workshop has been chosen because the field of Embedded Systems has not only gained major interest in the research community but has also significant economic impact in different application fields. Mechanic, hydraulic, and electronic control systems are being replaced by microcomputer based embedded systems.

Conceptual Modeling for Discrete-Event Simulation Stewart Robinson, Roger Brooks, Kathy Kotiadis, Durk-Jouke Van Der Zee, 2010-08-02 Bringing together an international group of researchers involved in military, business, and health modeling and simulation, *Conceptual Modeling for Discrete Event Simulation* presents a comprehensive view of the current state of the art in the field. The book addresses a host of issues including: What is a conceptual model? How is conceptual modeling? **Visual Modeling Technique** Daniel Tkach, Walter Fang, Andrew So, 1996 This groundbreaking book describes the Visual Modeling Technique (VMT), a comprehensive methodology that integrates visual programming into the object-oriented application development life cycle. The book shows how the visual programming paradigm when supported by effective tools becomes central to the productivity of object developers.

Advanced Information Systems Engineering Workshops Camille Salinesi, Oscar Pastor, 2011-06-17 This book constitutes the thoroughly refereed proceedings of ten international workshops held in London, UK, in conjunction with the 23rd International Conference on Advanced Information Systems Engineering (CAiSE 2011) in June 2011. The 59 revised papers were carefully selected from 139 submissions. The ten workshops included: Business IT Alignment and Interoperability (BUSITAL), Conceptualization of Modelling Methods (CMM), Domain Specific Engineering (DSE), CAiSE Governance, Risk and Compliance (GRCIS), Integration of IS Engineering Tools (INISSET), System and Software Architectures (IWSSA), Ontology Driven Information Systems Engineering (ODISE), Ontology Models Conceptualization and Epistemology in Social, Artificial, and Natural Systems (ONTOSE), Semantic

metamodeling in the context of extended reality and emphasizes the need for new concepts in metamodeling to effectively combine it with extended reality technologies The central question of this work is how metamodeling can be used in and for extended reality The book is structured in nine chapters Chapter 1 introduces the topic by providing background information and outlining the research objectives questions methodology and structure Chapter 2 delves into the existing literature and developments in the field It covers various aspects of modeling such as conceptual enterprise and metamodeling as well as extended reality XR virtual reality VR augmented reality AR and the metaverse Next chapter 3 presents the generic requirements for metamodeling for augmented and virtual reality by systematically deriving use cases for joining AR and metamodeling Chapter 4 then identifies specific requirements for integrating metamodeling with XR such as coordinate mappings visualization of model components detection and tracking context or interaction Subsequently chapter 5 introduces a new domain specific visual modeling language for creating augmented reality scenarios particularly within the context of metamodeling before chapter 6 outlines the conceptualization and design of a 3D enhanced metamodeling platform considering extended reality detailing its structure components and the interconnection of its elements Chapter 7 then presents the initial implementation of the various components of this modeling platform and chapter 8 evaluates the newly introduced platform both theoretically and empirically Eventually chapter 9 concludes the book by an alignment with the initial research questions discussing limitations and provides a final summary and an outlook for further research This book mainly aims at researchers in conceptual modeling especially in projects related to XR VR or AR as the presented new domain specific modeling method for creating workflows for XR VR AR applications does not assume specific prior programming knowledge
