Tools And Environments For Parallel And Distributed Systems:

Tools and Environments for Parallel and Distributed Systems Amr Zaky, Ted Lewis, 2012-12-06 Developing correct and efficient software is far more complex for parallel and distributed systems than it is for sequential processors. Some of the reasons for this added complexity are the lack of a universally acceptable parallel and distributed programming paradigm, the criticality of achieving high performance, and the difficulty of writing correct parallel and distributed programs. These factors collectively influence the current status of parallel and distributed software development tools efforts. **Tools and Environments for Parallel and Distributed Systems** addresses the above issues by describing working tools and environments and gives a solid overview of some of the fundamental research being done worldwide. Topics covered in this collection are mainstream program development tools, performance prediction tools, and studies, debugging tools, and research and nontraditional tools. Audience: Suitable as a secondary text for graduate level courses in software engineering and parallel and distributed systems and as a reference for researchers and practitioners in industry.

Tools and Environments for Parallel and Distributed Computing Salim Hariri, Manish Parashar, 2004-03-01 Zugänge zur parallelen Rechen-technik. Dieses Buch behandelt ein breites Spektrum verschiedener Ansätze. Sie erhalten einen aufschlussreichen Überblick über die leistungsfähigsten derzeit gebräuchlichen Tools. Fallstudien stellen besonders erfolgreiche Implementationen von Stanford und MIT vor. Im Vordergrund der Diskussion steht die Performance der Lösungen. Die Autoren arbeiten am renommierten Northeast Parallel Architectures Center.

Programming Environments for Massively Parallel Distributed Systems Karsten M. Decker, Rene M. Rehm, 2013-04-17 Massively Parallel Systems (MPSs) with their scalable computation and storage space promises are becoming increasingly important for high performance computing. The growing acceptance of MPSs in academia is clearly apparent. However, in industrial companies their usage remains low. The programming of MPSs is still the big obstacle, and solving this software problem is sometimes referred to as one of the most challenging tasks of the 1990s. The 1994 working conference on Programming Environments for Massively Parallel Systems was the latest event of the working group WG 10.3 of the International Federation for Information Processing (IFIP) in this field. It succeeded the 1992 conference in Edinburgh on Programming Environments for Parallel Computing. The research and development work discussed at the conference addresses the entire spectrum of software problems, including virtual machines, which are less cumbersome to program, more convenient programming models, advanced programming languages, and especially more sophisticated programming tools, but also algorithms and applications.
