examination of the literary and cinematic representations of brainwashing during the Cold War era CIA operative who was a tireless campaigner against communism it took hold quickly and became a means to articulate fears of totalitarian tendencies in American life David Seed traces the assimilation of the notion of brainwashing into science fiction political commentary and conspiracy narratives of the Cold War era He demonstrates how these works grew out of a context of political and social events and how they express the anxieties of the time The Manchurian Candidate Seed provides new interpretations of writers such as Orwell and Burroughs within the history of psychological manipulation for political purposes using declassified and other documents to contextualise the material he explores the shifting view points of how brainwashing is represented changing from an external threat to American values to an internal threat against individual American liberties by the U S government will welcome this study *Mammalian Carbohydrate Recognition Systems* Paul R.

Crocker,2012-12-06 In the last decade there has been a great expansion in our knowledge of the existence nature and functions of mammalian carbohydrate binding proteins This book covers the structures and postulated functions for the major classes of mammalian carbohydrate binding proteins These include intracellular lectins involved in diverse functions such as protein synthesis quality control targeting of lysosomal enzymes and in the secretory pathway In addition several chapters are devoted to other major families of lectins that are found at the cell surface or in extracellular fluids which are involved in various recognition functions such as cell cell interactions in inflammation and recognition of pathogen carbohydrates in host defence *Railway Mail Service - Hours of Service. Subcommittee No. 12--Railroad Mail Service,1926 *The Biochemistry of Glycoproteins and Proteoglycans* William Lennarz,2012-12-06 Although glycoproteins and proteoglycans have been a subject of research for many years it is only during the last five or so years that they have aroused the interest of a very broad cross section of investigators in the biological sciences The reason for this expanded interest in these molecules is simple not only are glycoproteins and proteoglycans ubiquitous but many are molecules with well defined and important biological functions The list of molecules that fall into this category grows daily interferon immunoglobulins certain hormones many cell surface receptors and viral coat proteins are but a few examples Thus investigators with interests as diverse as viral replication cell cell interactions polyisoprenoid synthesis secretory processes hormone responses embryonic development and immunology have become concerned with glycoproteins and proteoglycans The objective of this book is to summarize the current state of knowledge on the biochemistry of these molecules Coverage is by no means encyclopedic rather the thrust is to emphasize the recent advances The first chapter deals primarily with structural work on the oligosaccharide chains of glycoproteins but it will be apparent in it and in the succeeding two chapters on biosynthesis that not only do structural studies aid biosynthetic

investigations but that studies on biosynthesis often play a major role in elucidation of structure      *Hearings* United States.
