Participatory Development Ponna Wignaraja, 1991 Tackling the problems of Third World development from a different perspective this study offers a new approach in which people at the grass roots level in South Asia become both the subjects and the objects of a participatory process of development designed to improve living conditions.

The Politics of Global Competitiveness Paul Cammack, 2022 Marx predicted in *Capital* 1867 that as capitalism became global patterns of work would be transformed and workers would need to develop versatility flexibility and mobility. This general law of social production as he called it is now in evidence all around us in global value chains zero hours contracts and contract work organised through digital platforms. It results from competition between capitalists scientific and technological revolutions in production and incessant advances in the division of labour as production processes are broken down into ever smaller steps. This book documents the leading roles of the Paris based Organisation for Economic Cooperation and Development and the Washington based World Bank as advocates of these developments. They do not as generally supposed simply represent the interests of the advanced economies or the West and their transnational corporations. They promote a single global model of capitalist development without limits and on a genuinely global scale. It calls upon all states to adjust continually to the structural and social demands of competitiveness which they see as essential to the global hegemony of capital over labour. The OECD and the World Bank propose policies that give girls and women equal access to education and paid work reform welfare to make work pay introduce flexible labour contracts that make hiring and firing easier focus education on skills that boost employability and draw workers in the developing world from the informal sector into the formal sector where they can be more productive. This is the politics of global competitiveness.

Alternative Economic Indicators (Routledge Revivals) Victor Anderson, 2014-02-04 The main objective of politicians is to maximise economic growth which heavily drives political policy.

and decision making Critics of the maximisation of growth as the central aim of economic policy have argued that growth in itself is not necessarily a good thing particularly for the environment however what would replace the system and how it would be measured are questions that have been rarely answered satisfactorily First published in 1991 this book was the first to lay out an entirely new set of practical proposals for developing new economic measurement tools with the aim of being sustainable green and human centred Victor Anderson proposes that a whole set of indicators rather than a single one should play all the roles that GNP Gross National Product is responsible for With a detailed overview of the central debates between the advocates and opponents of continued economic growth and an analysis of the various proposals for modification this title will be of particular value to students interested in the diversity of measurement tools and the notion that economies should also be evaluated by their social and environmental consequences Perspectives on Global Development 2019 Rethinking Development Strategies OECD,2018-11-29 In 2008 the weight of developing and emerging economies in the global economy tipped over the 50% mark for the first time Since then Perspectives on Global Development has been tracking the shift in global wealth and its impact on developing countries How much longer can the dividends of **World Development Report** ,1999 *Assessing World Bank Support for Trade, 1987-2004* Yvonne M.
