A Scientific Approach to Writing for Engineers and Scientists Robert E. Berger, 2014-05-23 A SCIENTIFIC APPROACH TO WRITING Technical ideas may be solid or even groundbreaking but if these ideas cannot be clearly communicated reviewers of technical documents e.g proposals for research funding articles submitted to scientific journals and business plans to commercialize technology are likely to reject the argument for advancing these ideas The problem is that many engineers and scientists entirely comfortable with the logic and principles of mathematics and science treat writing as if it possesses none of these attributes The absence of a systematic framework for writing often results in sentences that are difficult to follow or arguments that leave reviewers scratching their heads This book fixes that problem by presenting a scientific approach to writing that mirrors the sensibilities of scientists and engineers an approach based on an easily discernable set of principles Rather than merely stating rules for English grammar and composition this book explains the reasons behind these rules and shows that good reasons can guide every writing decision This resource is also

well suited for the growing number of scientists and engineers in the U S and elsewhere who speak English as a second language as well as for anyone else who just wants to be understood *Scientific Writing in Engineering* Kosmas Dragos, Kay Smarsly, 2019-05-27 *Scientific Writing in Engineering* helps scientists engineers and students of all academic levels efficiently write scientific texts such as scientific articles conference papers theses reports and research proposals Drawing from long time experience in academic teaching the authors walk the readers through scientific writing step by step all the way from a blank first page to complete manuscripts A comprehensive list of concise recommendations and more than one hundred examples taken from real life scientific texts offer readers the chance to draw easy analogies between own scientific texts and the examples provided in this book The elaborate recommendations with emphasis on specific characteristics of writing in engineering sciences serve as complete self study material that renders the book a practical guide to effective scientific writing Readers will enhance their knowledge on scientific text structuring and will learn to avoid pitfalls in use of English including grammatical and syntactical phenomena Readers are given the opportunity to handle non textual elements in scientific writing such as figures and mathematical equations and formulas Finally the book provides detailed discussions on citing and referencing along with recommendations on formal electronic correspondence **Writing for Engineering and Science** Tyler G. Hugh Marsh,2000 **Learning to Communicate in Science and Engineering** Mya Poe,Neal Lerner,Jennifer Craig,2010-02-05 Case studies and pedagogical strategies to help science and engineering students improve their writing and speaking skills while developing professional identities To many science and engineering students the task of writing may seem irrelevant to their future professional careers At MIT however students discover that writing about their technical work is important not only in solving real world problems but also in developing their professional identities MIT puts into practice the belief that engineers who don t write well end up working for engineers who do write well requiring all students to take communications intensive classes in which they learn from MIT faculty and writing instructors how to express their ideas in writing and in presentations Students are challenged not only to think like professional scientists and engineers but also to communicate like them This book offers in depth case studies and pedagogical strategies from a range of science and engineering communication intensive classes at MIT It traces the progress of seventeen students from diverse backgrounds in seven classes that span five departments Undergraduates in biology attempt to turn scientific findings into a research article graduate students learn to define their research for scientific grant writing undergraduates in biomedical engineering learn to use data as evidence and students in aeronautic and astronautic engineering learn to communicate collaboratively Each case study is introduced by a description of its theoretical and curricular context and an outline of the objectives for the students activities The studies describe the on the ground realities of working with faculty staff and students to achieve communication and course goals offering lessons that can be easily applied to a wide variety of settings and institutions Writing Like An Engineer Dorothy A. Winsor,2013-11-05 Comprised of a study spanning over five years this text looks at four engineering co op students as they write at work Since the contributors have a foot in both worlds work and school the book should appeal to people who are interested in how students learn to write as well as people who are interested in what writing at work is like Primarily

concerned with whether engineers see their writing as rhetorical or persuasive the study attempts to describe the students changing understanding of what it is they do when they write Two features of engineering practice that have particular impact on the extent to which engineers recognize persuasion are identified a reverence for data and the hierarchical structure of the organizations in which engineering is most commonly done Both of these features discourage an open recognition of persuasion Finally the study shows that the four co op students learned most of what they knew about writing at work by engaging in situated practice in the workplace rather than by attending formal classes
