Intelligent Systems for Engineering Ram D. Sriram,2012-12-06 When men of knowledge impart this knowledge I do not mean they will convince your reason I mean they will awaken in you the faith that it is so Sri Krishna Bhagavadgita

BACKGROUND The use of computers has led to significant productivity increases in the engineering industry. Most of the computer aided engineering applications were restricted to algorithmic computations such as finite element programs and circuit analysis programs. However a number of problems encountered in engineering are not amenable to purely algorithmic solutions. These problems are often ill structured the term ill structured problems is used here to denote problems that do not have a clearly defined algorithmic solution. An experienced engineer deals with these ill structured problems using his/her judgment and experience. The knowledge based systems (KBS) technology which emerged out of research in artificial intelligence (AI) offers a methodology to solve these ill structured engineering problems. The emergence of the KBS technology can be viewed as the knowledge revolution. Other important events that led to increased productivity are the industrial revolution 17th century, the invention of the transistor and associated developments first half of the 20th century and the world wide web towards the end of the 20th century. Kurzweil in a lecture at MIT on December 3 1987 linked the progress of automation to two industrial revolutions the first industrial revolution leveraged our physical capabilities whereas the second industrial revolution the knowledge revolution is expected leverage our mental capabilities.

ECOOP '87. European Conference on Object-Oriented Programming Jean Bezivin, Jean-Marie Hullot, Pierre Cointe, Henry Lieberman, 2007-03-06 In October 1983 an informal meeting was organized in Le Cap d'Agde with the help of the BIGRE bulletin. Sixty people turned out to hear more than ten presentations on object oriented programming. More important was their unanimous demand for other more structured encounters. So about one year later the Object group was created by AFCET. A second workshop was organized in Brest and again one year later in Paris each time showing increased attendance and interest. The success of these meetings and the fact that similar activities were taking place in other European countries especially Great Britain and Germany led to the idea of an annual European Conference providing a forum for theorists and practitioners interested in the object oriented programming paradigm. It is impossible to acknowledge here all the people and organizations that welcomed with great enthusiasm the birth of the ECOOP conference and contributed to its organization. More than a hundred submissions were received and the program committee had the unpleasant task of turning down many valuable contributions. We hope however that the selection of papers for ECOOP 87 emphasizes the fundamental issues and problems of object oriented programming and will point toward interesting future research directions.

ECOOP '95, Object-oriented Programming Walter Olthoff, 1995 This book presents the carefully refereed proceedings of the 9th European Conference on Object Oriented Programming ECOOP 95 held in Aarhus Denmark in August 1995. Besides the scientific conference documented in this book ECOOP 95 included a number of tutorials and workshops as well as a two day technology exhibition and thus reflects the full spectrum of Object Oriented Programming. The volume presents three invited contributions and 18 full research papers selected from more than 90 submissions. The papers are organized in sections on types programming languages reflective programming and verification implementation concurrency and specification and
