Smoke And Mirrors How Science Reflects Reality:

Smoke and Mirrors James Robert Brown, 2002-10-02 Realism is an enlightening story a tale which enriches our experience and makes it more intelligible Yet this wonderful picture of humanity's best efforts at knowledge has been badly bruised by numerous critics James Robert Brown in *Smoke and Mirrors* fights back against figures such as Richard Rorty Bruno Latour Michael Ruse and Hilary Putnam who have attacked realist accounts of science But this volume is not wholly devoted to combating Rorty and others who blow smoke in our eyes the second half is concerned with arguing that there are some amazing ways in which science mirrors the world The role of abstraction abstract objects and a priori ways of getting at reality are all explored in showing how science reflects reality *Smoke and Mirrors* is a defence of science and knowledge in general as well as a defence of a particular way of understanding science It is of interest to all those who wish or need to know how science works

[Philosophy of Science for Scientists](#) Lars-Göran Johansson, 2015-12-17 This textbook offers an introduction to the philosophy of science It helps undergraduate students from the natural the human and social sciences to gain an understanding of what science is how it has developed what its core traits are how to distinguish between science and pseudo science and to discover what a scientific attitude is It argues against the common assumption that there is fundamental difference between natural and human science with natural science being concerned with testing hypotheses and discovering natural laws and the aim of human and some social sciences being to understand the meanings of individual and social group actions Instead examines the similarities between the sciences and shows how the testing of hypotheses and doing interpretation hermeneutics are similar activities The book makes clear that lessons from natural scientists are relevant to students and scholars within the social and human sciences and vice versa It teaches its readers how to effectively demarcate between science and pseudo science and sets criteria for true scientific thinking Divided into three parts the book first examines the question What is Science It describes the evolution of science defines knowledge and explains the use of and need for hypotheses and hypothesis testing The second half of part I deals with scientific data and observation qualitative data and methods and ends with a discussion of theories on the development of science Part II offers philosophical reflections on four of the most important concepts in science causes explanations laws and models Part III presents discussions on philosophy of mind the relation between mind and body value free and value related science and reflections on actual trends in science

Chasing Reality Mario Bunge, Professor Mario Bunge, 2006-01-01 Dealing with the controversies over the reality of the external world this work offers a defense of realism a critique of various forms of contemporary anti realism and a sketch of the author's version of realism namely hylorealism It examines the main varieties of antirealism and argues that all of these in fact hinder scientific research
