What is more this guide is written by experts especially for beginners and professionals alike. Proper sizing of a solar system is very important. The final goal of the design of a photovoltaic system is to come up with a cost effective efficient and reliable solar panel system for your home RV vehicle boat or business a solar system that squeezes the maximum possible power for every cent invested. In our opinion the main drawback of many solar books is that they give too much general information about solar panels and solar components and if you are lucky enough just one or two very basic design formulas. Those formulas however are far away from a proven yet simple system for sizing a solar system from scratch. Moreover such sizing information is buried in too much fillers and fluffs you could easily find by just surfing the web. Obviously such authors limit solar design methods to their own cases only. Ironically the reader s case rarely coincides with the authors solar case. You feel confused and lost without being aware of how to wire and put all the components of the solar power system together. The mission of this book is to fill this gap by offering a simple practical fast step by step approach for designing a solar system of any scale whether simple or complex intended for your home business RV vehicle or boat. The book is written by experts holding master s degree in electronics and is intended for those who cannot get started or are utterly confused. Grab the book *Ultimate Solar Power Design Guide Less Theory More Practice* and get your solar powered home RV vehicle boat or business today. While reading the book you will discover that our approach to sizing a solar system is just the opposite to the currently prevailing ones. We prefer to give you lots of fast and simple step by step universal design methods applicable to all cases.

accompanied with many sizing examples starting from very simple solar power systems and finishing with the design of the more sophisticated off grid solar power system Thanks to this approach you will be capable of designing any solar power system or tailor the sizing methods according to your own needs The book provides 3 general approaches Business sizing simple and fast design but not too accurate for every case Basic sizing not so fast but more accurate and Advanced sizing more accurate but not so fast You may choose one of the general approaches depending on the type of system you are going to use For example the fastest business case approach could be used for sizing simple solar systems for outdoor activities It may be even accurate enough for sizing small solar systems for RV vehicles and boats The basic and the more accurate advanced approach are best suited for designing off grid and grid tied solar electric systems Grab the book Ultimate Solar Power Design Guide Less Theory More Practice Now
