

# Mouse Behavioral Tests: Learning & Memory

## Fear Conditioning

During training trials, mouse is exposed to a cue (noise) and aversive stimulus. Cue-induced learning is tested by measuring freezing behavior.

## Morris Water Maze

Tests a mouse's ability to use visual cues to locate a hidden underwater platform. Swimming is recorded and tracked via an overhead camera.

## Novel Object Recognition

Mouse is exposed to certain objects over training trials. During test trials, one object is replaced with an unfamiliar one and time spent with novel object is recorded.

## Object Placement

During training trials, mouse is exposed to identical objects in the same locations. On test trials, one of the objects is moved and time spent with the objects recorded.

## Passive Avoidance

When the mouse crosses to the dark side of the chamber it receives an aversive stimulus (shock) through the floor. On test trials, time to cross to the dark chamber is recorded.

## Radial Arm Water Maze

Mice learn to find a hidden underwater platform in one of the arms. In test trials, mice are placed to different arms not containing the platform.

## Water T Maze

Tests executive function and short term memory. Mice learn to locate a hidden underwater platform in one of the arms. Arms can be blocked off to increase difficulty.

## Y Maze

Tests short term memory. During training trials, one of the arms is blocked off. During test trials, it is opened and the time spent exploring the new arm is measured.

**Studies in Learning and Memory** Benton J. Underwood, 1982 *Behavioral Neuroscience of Learning and Memory*  
Robert E. Clark, Stephen Martin, 2018-03-27 Behavioral Neuroscience of Learning and Memory brings together the opinions and expertise of some of the world's foremost neuroscientists in the field of learning and memory research. The volume provides a broad coverage of contemporary research and thinking in this field, focusing both on well-established topics such as the medial temporal lobe memory system as well as emerging areas of research such as the role of memory in decision making and the mechanisms of perceptual learning. Key intersecting themes include the molecular and cellular mechanisms of memory formation, the multiplicity of memory systems in the brain, and the way in which technological innovation is driving discovery. Unusually for a volume of this kind, this volume brings together research from both humans and animals, often relatively separate areas of discourse, to give a more comprehensive and integrated view of the field. The book will be of interest to both established researchers who wish to broaden their knowledge of topics outside of their specific areas of expertise and for students who need a resource to help them make sense of the vast scientific literature on this subject.

*Neurobiology of Learning and Memory* Raymond P. Kesner, Joe L. Martinez Jr., 2007-07-13 The first edition of *Neurobiology of Learning and Memory* was published in 1998 to rave reviews. As before, this second edition will discuss anatomy, development, systems, and models, though the organization and content is substantially changed, reflecting advances in the field. Including information from both animal and human studies, this book represents an up-to-date review of the most important concepts associated with the basic mechanisms that support learning and memory, theoretical developments, use of computational models, and application to real-world problems. The emphasis of each chapter will be the presentation of cutting-edge research on the topic, the development of a theoretical perspective, and providing an outline that will aid a student in understanding the most important concepts presented in the chapter. New material covers basal ganglia, cerebellum, prefrontal cortex, and fear conditioning. Additional information is available on applied issues, i.e., degenerative disease, aging, and enhancement of memory. Each chapter includes an outline to assist student understanding of challenging concepts. Four color illustrations throughout. [Learning and Memory: A Comprehensive Reference](#), 2017-07-07 *Learning and Memory: A Comprehensive Reference* Second Edition, Four Volume Set is the authoritative resource for scientists and students interested in all facets of learning and memory. This updated edition includes chapters that reflect the state of the art of research in this area. Coverage of sleep and memory has been significantly expanded, while neuromodulators in memory processing, neurogenesis, and epigenetics are also covered in greater detail. New chapters have been included to reflect the massive increase in research into working memory and the educational relevance of memory research. No other reference work covers so wide a territory and in so much depth. Provides the most comprehensive and authoritative resource available on the study of learning and memory and its mechanisms. Incorporates the expertise of over 150 outstanding investigators in

the field providing a one stop resource of reputable information from world leading scholars with easy cross referencing of related articles to promote understanding and further research Includes further reading for each chapter that helps readers continue their research Includes a glossary of key terms that is helpful for users who are unfamiliar with neuroscience terminology
