

STATISTICS

THE BASIC PRINCIPLES OF STATISTICS FOR INTRODUCTORY COURSES

BASIC DEFINITIONS

STATISTICS is the study of methods for gathering, organizing, analyzing, and interpreting numerical information. It is a branch of mathematics that deals with the collection, organization, analysis, interpretation, and presentation of data.

- Population:** The collection of all individuals or objects that are being studied.
- Sample:** A subset of the population selected for study.
- Parameter:** A numerical value that describes a characteristic of the population.
- Statistic:** A numerical value that describes a characteristic of the sample.

Frequency Distribution: A table that shows the number of times each value or range of values occurs in a data set. It is used to organize and summarize data.

Relative Frequency: The ratio of the number of times a value occurs to the total number of values in the data set.

Mean: The average of a set of numbers, calculated by adding all the numbers together and dividing by the total number of numbers.

Median: The middle value in a data set when the values are arranged in order. If there is an even number of values, the median is the average of the two middle values.

Mode: The value that appears most frequently in a data set.

Range: The difference between the highest and lowest values in a data set.

Standard Deviation: A measure of the spread or dispersion of a data set. It is calculated as the square root of the variance.

Variance: The average of the squared differences between each data point and the mean. It is a measure of how far the data points are from the mean.

FREQUENCY DISTRIBUTION

Example: The number of books read by students in a class.

Number of Books	Frequency
0	1
1	2
2	3
3	4
4	5
5	3
6	2
7	1

Example: The number of students who passed an exam.

Number of Students	Frequency
10	1
20	2
30	3
40	4
50	5
60	3
70	2
80	1

Relative Frequency: The ratio of the frequency of a value to the total frequency.

Mean: The average of the data set, calculated by summing all values and dividing by the total number of values.

MEASURES OF CENTRAL TENDENCY

Mean: The average of a set of numbers, calculated by summing all values and dividing by the total number of values.

Median: The middle value in a data set when the values are arranged in order.

Mode: The value that appears most frequently in a data set.

Range: The difference between the highest and lowest values in a data set.

Standard Deviation: A measure of the spread or dispersion of a data set.

Variance: The average of the squared differences between each data point and the mean.

MEASURES OF DISPERSION

Range: The difference between the highest and lowest values in a data set.

Variance: The average of the squared differences between each data point and the mean.

Standard Deviation: The square root of the variance, representing the average distance of data points from the mean.

Relative Standard Deviation: The ratio of the standard deviation to the mean, used to compare the variability of different data sets.

Skewness: A measure of the asymmetry of a data set, indicating the direction and degree of the tail.

Kurtosis: A measure of the "tailedness" of a data set, indicating the presence of outliers.

Interquartile Range (IQR): The range between the first and third quartiles, representing the middle 50% of the data.

Five-Number Summary: A set of statistics that includes the minimum, first quartile, median, third quartile, and maximum.

Box Plot: A graphical representation of the five-number summary, showing the distribution of data.

Normal Distribution: A bell-shaped curve that is symmetric and represents many natural phenomena.

Standard Normal Distribution: A normal distribution with a mean of 0 and a standard deviation of 1.

Central Limit Theorem: A theorem that states that the distribution of sample means will approach a normal distribution as the sample size increases.

Law of Large Numbers: A theorem that states that as the sample size increases, the sample mean will converge to the population mean.

Confidence Interval: A range of values that is likely to contain the population parameter with a certain level of confidence.

Hypothesis Testing: A statistical method for testing a claim or statement about a population parameter.

P-value: The probability of observing a test statistic as extreme as the one observed, assuming the null hypothesis is true.

Significance Level: The threshold for rejecting the null hypothesis, typically set at 0.05.

GRAPHING TECHNIQUES

Bar Graph: A chart that uses vertical bars to represent the frequency of categories.

Line Graph: A chart that uses lines to connect data points, showing trends over time.

Pie Chart: A chart that uses slices of a circle to represent the relative proportions of categories.

Scatter Plot: A chart that uses dots to represent the relationship between two variables.

Area Graph: A chart that uses shaded areas to represent the magnitude of data points.

Box Plot: A chart that uses a box and whiskers to represent the distribution of data.

Normal Curve: A bell-shaped curve that represents a normal distribution.
