The Microphysical World:

The Microphysical World William Wilson, 1951 **The Microphysical World** William WILSON (F.R.S.), 1951 *The Common Mind* Philip Pettit, 1996 This work argues for an original way of marking off thinking subjects in particular human beings from other intentional systems both natural and artificial **The Syndetic Paradigm** Robert Aziz, 2012-02-01 In *The Syndetic Paradigm* Robert Aziz argues that the Jungian Paradigm is a deeply flawed theoretical model that falls short of its promise Aziz offers in its stead what he calls the Syndetic Paradigm In contrast to the Jungian Paradigm the Syndetic Paradigm takes the critical theoretical step of moving from a closed system model of a self regulatory psyche to an open system model of a psyche in a self organizing totality The Syndetic Paradigm in this regard holds that all of life is bound together in a highly complex whole through an ongoing process of spontaneous self organization The new theoretical model that emerges in Aziz's work while taking up the fundamental concerns of its Freudian and Jungian predecessors with psychology ethics spirituality sexuality politics and culture conducts us to an experience of meaning that altogether exceeds their respective bounds *Supervenience* Jaegwon Kim, 2017-10-24 The International Research library of Philosophy collects in book form a wide range of important and influential essays in philosophy drawn predominantly from English language journals Each volume in the library deals with a field of enquiry which has received significant attention in philosophy in the last 25 years and is edited by a philosopher noted in that field Conservative Reductionism Michael Esfeld, 2011 *Conservative Reductionism* sets out a new theory of the relationship between physics and the special sciences within the framework of functionalism It argues that it is wrong headed to conceive an opposition between functional and physical properties or functional and physical descriptions respectively and to build an anti reductionist argument on multiple realization By contrast a all properties that there are in the world including the physical ones are functional properties in the sense of being causal properties and b all true descriptions laws theories that the **The Possible Universe** J. A. Tallet, 1997-02-20 *The Possible Universe* explores a hypothetical philosophical synthesis based on the largest conceivable domain the realm of the possible This book suggests a final and ultimate in the notion of the possible by which all necessary and contingent entities coalesce into the universe as possibility A description of such a formal theme is attempted through an axiomatic system of logic The book departs from the established analytic current in philosophy by appealing to the synthetic character of vision building which is supposed to be after all the essence of philosophical endeavor This return to the trunk takes advantage however of the rigorous developments of analysis in the fields of validation and formalism **The Value of Rationality** Ralph Wedgwood, 2017 Ralph Wedgwood gives a general account of the concept of rationality *The Value of Rationality* is designed as the first instalment of a trilogy to be followed by accounts of the requirements of rationality that apply specifically to beliefs and choices The central claim of the book is that rationality is a normative concept This claim is defended against some recent objections Normative concepts are to be explained in terms of values not in terms

of ought or reasons Rationality is itself a value rational thinking is in a certain way better than irrational thinking Specifically rationality is an internalist concept what it is rational for you to think now depends solely on what is now present in your mind Nonetheless rationality has an external goal the goal of thinking correctly or getting things right in one s thinking The connection between thinking rationally and thinking correctly is probabilistic if your thinking is irrational that is in effect bad news about your thinking s degree of correctness This account of rationality explains how we should set about giving a theory of what it is for beliefs and choices to be rational Wedgwood thus unifies practical and theoretical rationality and reveals the connections between formal accounts of rationality such as those of formal epistemologists and decision theorists and the more metaethics inspired recent discussions of the normativity of rationality He does so partly by drawing on recent work in the semantics of normative and modal terms including deontic modals like ought *European Philosophy of Science - Philosophy of Science in Europe and the Viennese Heritage* Maria Carla Galavotti, Elisabeth Nemeth, Friedrich

Stadler, 2013-08-28 This volume combines the theoretical and historical perspective focusing on the specific features of a European philosophy of science On the occasion of the 20th anniversary of the Institute Vienna Circle the Viennese roots and influences will be addressed in addition There is no doubt that contemporary philosophy of science originated mainly in Europe beginning in the 19th century and has influenced decisively the subsequent development of globalized philosophy of science esp in North America Recent research in this field documents some specific characteristics of philosophy of science covering the natural social and also cultural sciences in the European context up to the destruction and forced migration caused by Fascism and National Socialism This European perspective with the integration of history and philosophy of science and the current situation in the philosophy of science after the transatlantic interaction and transformation and the return after World War II raises the question of contemporary European characteristics in the philosophy of science The role and function of the renowned Vienna Circle of Logical Empiricism and its impact and influence on contemporary philosophy of science is on the agenda too Accordingly the general topic is dealt with in two parallel sessions representing systematic formal as well as genetic historical perspectives on philosophy of science in a European context up to the present **A**
