Bayoumi,2012-12-06 Designing VLSI systems represents a challenging task It is a transfonnation among different specifications corresponding to different levels of design abstraction behavioral stntctural and physical The behavioral level describes the functionality of the design It consists of two components static and dynamic The static component describes operations whereas the dynamic component describes sequencing and timing The structural level contains infonnation about components control and connectivity The physical level describes the constraints that should be imposed on the floor plan the placement of components and the geometry of the design Constraints of area speed and power are also applied at this level To implement such multilevel transfonnation a design methodology should be devised taking into consideration the constraints limitations and properties of each level The mapping process between any of these domains is non isomorphic A single behavioral component may be transfonned into more than one structural component Design methodologies are the most recent evolution in the design automation era which started off with the introduction and subsequent usage of module generation especially for regular structures such as PLA s and memories A design methodology should offer an integrated design system rather than a set of separate unrelated routines and tools A general outline of a desired integrated design system is as follows Decide on a certain unified framework for all design levels Derive a design method based on this framework Create a design environment to implement this design method **The TOGAF® Standard, 10th Edition - ADM Practitioners' Guide** The Open Group,2022-04-26 html body data pb style W1T2LUK justify content flex start display flex flex direction column background position left top background size cover background repeat no repeat background attachment scroll This document is a TOGAF Series Guide A Practitioners Approach to Developing Enterprise Architecture Following the TOGAF ADM It has been developed and approved by The Open Group and is part of the TOGAF Standard 10th
