## **Valuing The Environment Methodological And Measurement Issues:**

**Valuing the Environment: Methodological and Measurement Issues** Rüdiger Pethig, 2013-03-14 During the last decades environmental economics as a science has been very successful in improving our understanding of environment economy interdependence Using conventional economic methodology environmental aspects have been explicitly incorporated into economic models making use of the concept of externality This concept was already familiar to economists long before evidence of severe environmental deterioration found its way into the headlines and people's awareness But before that time external effects were not considered as being empirically very relevant they seemed to be like the example of the bees and the fruit trees somewhat bucolic in nature All that changed dramatically when it was no longer possible or easy to ignore the large scale environmental disruption with its negative feedback on consumers and producers caused by growing pollution and excessive use of environmental resources In diagnosing the discrepancy between private and social cost as the cause of the problem the externality paradigm proved very useful The correct diagnosis implies the straightforward cure to internalise all external cost namely the damage cost of pollution But it is one thing to identify the qualitative nature of the problem at an abstract conceptual level and quite another thing to place specific money values on pollution damage and society's valuation of the environment respectively in the context of specific pollution control problems Very often it is controversial not only how inefficient the no policy situation is but also what exactly the net benefit of any public action of reducing pollution is

**Economics of Coastal and Water Resources: Valuing Environmental Functions** R.K. Turner, I. J. Bateman, W.N. Adger, 2013-04-18 Most of the chapters in this volume are authored by staff or associates of the Centre for Social and Economic Research on the Global Environment CSERGE CSERGE is a research centre sponsored by the UK Economic and Social Research Council ESRC which specialises in interdisciplinary work focussed on environmental management issues We are grateful for the long term support that we have received from the ESRC We would also like to acknowledge the efforts of Ann Dixon and Shin Pearce in the preparation of this volume vii INTRODUCTION CHAPTER 1 ECOLOGICAL ECONOMICS AND COASTAL ZONE ECOSYSTEMS VALUES AN OVERVIEW Turner R K Bateman I J and Adger W N 1 1 Coastal zone pressure and sustainable management challenges Given the continued intensification of the process of globalisation involving population growth population density changes via urbanisation industrial development increased trade and capital flows liberalisation of transnational corporation activity and lifestyle and attitudinal changes coastal zones and their hydrologically linked catchment areas have come under heavy environmental pressure The scale and extent of socio economic activities have profound implications for the now coevolving natural and human systems and their complex interrelationships Turner Perrings and Folke 1997 The consequences of this process of change manifest themselves across a range of spatial and temporal scales Indeed the juxtaposition of different spatial functional and temporal scales that is inherent in the catchment coastal ecosystems seas oceans continuum poses particularly difficult challenges for both

science and resource management governance

**Sustainable Practices in the Built Environment** Craig Langston, 2008-09-10 Sustainability is a key issue and its impact on the construction industry as one of the major users of the Earth's resources is starting to take hold. This book deals with sustainability as it affects the construction industry, looking at the techniques and issues which designers, engineers, planners, and construction managers will have to deal with in their day-to-day activities. It covers methods of analysis such as environmental impact assessment and cost-benefit analysis, as well as topics on design and energy regulation and conservation. The book is an important introduction to the subject for senior undergraduate and postgraduate students. Given the importance and novelty of the subject, professionals in the construction industry will also find the book valuable. *Sustainable Practices in the Built Environment* Craig A. Langston, Grace K. C. Ding, 2001 Sustainable Practices in the Built Environment is an important introduction to the subject for senior undergraduate and postgraduate students. Given the importance and novelty of the subject, professionals in the construction industry will also find the book valuable. Jacket

**Contingent Valuation** R. Carson, 2012-01-01 This major reference work, the first of its kind, provides a comprehensive and authoritative introduction to the large and growing literature on contingent valuation. It includes entries on over 7,500 contingent valuation papers and studies from over 130 countries, covering both the published and grey literatures. This book provides an interpretive historical account of the development of contingent valuation, the most commonly used approach to placing a value on goods not normally sold in the marketplace. The major fields catalogued here include culture, the environment, and health application. This bibliography is an ideal starting point for researchers wanting to find other studies that have valued goods or used techniques similar to those they are interested in. For those wanting to conduct meta-analyses, the book will serve as an invaluable guide to source material. In addition to the print edition, we offer access for purchasers of the book to a website providing the contents of the book as a searchable Word document and in a variety of standard bibliographic database forms. Contingent Valuation is an indispensable reference source for researchers, scholars, and policymakers concerned with survey approaches to the problem of environmental valuation. *Proceedings of the International Workshop Advances in Energy Studies*, 1998

**The Stated Preference Approach to Environmental Valuation** Richard T. Carson, 2007 There is a truly enormous literature on using stated preference information to place a monetary value on environmental amenities. This three-volume set provides the key papers for understanding the historical development of contingent valuation, its theoretical and statistical foundations, and the major controversies. It also contains representative papers covering all of the major application areas in environmental valuation. *Economic Growth and Valuation of the Environment* Ekko van Ierland, Ekko Ierland, Jan van der Straaten, Herman R. J. Vollebergh, 2001 The debate on the valuation of nature and the environment sustainable national

income and economic growth is one of prime importance in environmental economics Economic Growth and Valuation of the Environment deals with the fundamental approaches to calculating sustainable national income and their implications for the valuation of the environment Leading economists present their views on how the UN system of national accounts could be adjusted to include environmental impacts and the depletion of natural resources The discussion centres on the appropriateness of national income as an indicator for welfare and specific attention is paid to the question of how to value changes in environmental quality or emissions of pollutants Centred around the topics raised by the seminal publications of Roefie Hueting this book will be of great interest to environmental economists and students focusing on environmental and natural resource economics Environmental policymakers will welcome the lively and up to date discussion of a range of policy issues

Rationality Concepts in Environmental Valuation Oliver Frör, 2007 Survey based valuation techniques like the Contingent Valuation Method CVM rely particularly on the premise of respondents rationality when answering willingness to pay WTP questions Results of CVM surveys have repeatedly put this fundamental assumption into question This study adopts a more realistic view of rationality accounting for respondents limited capacities to process information Based on cognitive psychology a technique to detect and analyze the bounds of rationality inherent in WTP statements is developed Using an empirical example the influence of bounded rationality on the validity of CVM results is analyzed It is shown that individual differences in information processing play a major role From these results recommendations for future survey design are developed

*Principles of Environmental and Resource Economics* Henk Folmer, H. Landis Gabel, 1995 The economic causes of environmental and resource problems are the major theme of the first part of this volume which also discusses links to such important areas as growth theory national accounting and public policy making The goals and principles of environmental policy are addressed in the second part which provides a comprehensive overview of the various instruments applied in practice

**Environment & Planning**, 2001-07 **The Asian Wetlands**, 2002 Forests, Trees and Livelihoods, 2007 **Frontiers of Environmental Economics** Henk Folmer, 2001 Top European and American scholars contribute to this cutting edge volume on little researched areas of environmental and resource economics Topics include spatial economics poverty and development experimental economics large scale risk and its management organizational economics technological innovation and diffusion and many more The common thread is the language and methodology of economics yet the work aims to reach an audience wider than academia others such as researchers and policymakers in the public sector professional staff in research institutes and think tanks and environmental consultants will all benefit from an awareness of these crucial issues which if not considered now will become the problems of the future
