## **Study Of Human Values:**

The Study of Human Values Richard W. Kilby,1993 This book grows out of a long felt need for a readable source that explores all aspects of people s values Good information on the study of human values exists scattered about in various sources spanning disciplines and decades but it is not easily located nor readily assimilated and organized in mind Richard W Kilby attempts to remedy that situation This book is a general comprehensive work on human values and is composed of chapters on types of values their nature their role in lives their origins and methods of their study or assessment It was written on the assumption that most of its readers would know little of the subject rather than be specialists but Kilby s main consideration was to include everything that was pertinent and to do full justice to each topic One portion or another of The Study of Human Values should be useful to someone be it student instructor researcher or general reader *Human Values* De Witt Henry Parker,1931 **Understanding Human Values** Milton Rokeach,2008-06-30 This volume presents theoretical methodological and empirical advances in understanding and also in the effects of understanding individual and societal values **The Sociological Study of Human Values** William R. Catton (Jr.),1952 *The Psychology of Human Values* Gregory R Maio,2016-10-19 This original and engaging book advocates an unabashedly empirical approach to understanding human values abstract ideals that we consider important such as freedom equality achievement helpfulness security tradition and peace Our values are relevant to everything we do helping us choose between careers schools romantic partners places to live things to buy who to vote for and much more There is enormous public interest in the psychology of values and a growing recognition of the need for a deeper understanding of the ways in which values are embedded in our attitudes and behavior How do they affect our well being our relationships with other people our prosperity and our environment In his examination of these questions Maio focuses on tests of theories about values through observations of what people actually think and do In the past five decades psychological research has learned a lot about values and this book describes what we have learned and why it is important It provides the first overview of psychological research looking at how we mentally represent and use our values and constitutes important reading for psychology students at all levels as well as academics in psychology and related social and health sciences **Modern Science and Human Values** Everett W. Hall,1959 *Information and Human Values* Kenneth Fleischmann,2022-06-01 This book seeks to advance our understanding of the relationship between information and human values by synthesizing the complementary but typically disconnected threads in the literature reflecting on my 15 years of research on the relationship between information and human values advancing our intellectual understanding of the key facets of this topic and encouraging further research to continue exploring this important and timely research topic The book begins with an explanation of what human values are and why they are important Next three distinct literatures on values information and technology are analyzed and synthesized including the social psychology literature on human values the information studies literature on the core values

of librarianship and the human computer interaction literature on value sensitive design After that three detailed case studies are presented based on reflections on a wide range of research studies The first case study focuses on the role of human values in the design and use of educational simulations The second case study focuses on the role of human values in the design and use of computational models The final case study explores human values in communication via about or using information technology The book concludes by laying out a values and design cycle for studying values in information and presenting an agenda for further research

Modern Science and Human Values Everett Wesley Hall,1956 *Varieties of Human Value* Charles William Morris,1956 The present study begun in 1945 Is in part the outgrowth of my earlier book *Paths of Life* published in 1942 In that book s interpretation of religious attitudes and ethical systems past and present three basic dimensions of value were postulated and seven possible value patterns were analyzed in terms of those dimensions The seventh of the patterns or life orientations had never been manifested by a major social group but it was felt that the pattern held promise for man s future Such an analysis of patterned dimensional human values seemed worthy of sustained and critical investigation The belief that a scientific study of values might also advance the enterprise of the humanities was in part related to the philosophical tradition of American pragmatism Peirce James Dewey Mead and Lewis were major influences on my thinking and they had all believed that evaluations were much like scientific judgments and with some variations that a scientific study of values and evaluations not only was possible but would be of service to man in his characteristic activity as valuer It seemed desirable to put this philosophic position to a serious empirical test Preface p vii

Science and Human Values Jacob Bronowski,1965 From the picket lines of industrial conflict and the occupied ground of Maori land rights campaigns to the stormy skirmishes of women s liberation and disputed histories of the New Zealand Wars this discussion describes how documentary filmmakers have helped forge a sense of national identity among native New Zealanders The evocation maintains that these dedicated documentarians have also carried on preserving the work of the country s artists poets and Kiwiana exponents as they struggle to express the meaning of life in their home country Comprised as a series of dispatches from the front line of filmmaking this record highlights an adventurous art form celebrating its role in a colorful country s milestones

A Study of the Connotative Meanings of Human Values as Expressed by American and Indian College Students M. Mohamed Inayatulla,1965 History and Precedent in Environmental Design Anatol Rapoport,2013-06-29 This book is about a new and different way of approaching and studying the history of the built environment and the use of historical precedents in design However although what I am proposing is new for what is currently called architectural history both my approach and even my conclusions are not that new in other fields as I discovered when I attempted to find supporting evidence In fact of all the disciplines dealing with various aspects of the study of the past architectural history seems to have changed least in the ways I am advocating There is currently a revival of interest in the history of architecture and urban form a similar interest applies to theory vernacular design and culture environment relations After years of neglect the study of history and the use of historical precedent are again becoming important However that interest has not led to new approaches to the subject nor have its bases been examined This I try to do In so doing I discuss a more rigorous and I would argue a more valid way of looking at historical data and hence of using such data in a theory of the built environment and as precedent in environmental design Underlying this is my view of Environment Behavior Studies CEBS as an emerging theory rather than as data to help design based on current theory Although this will be the subject of another book a summary statement of this position may be useful An Introduction to Social Research Howard Washington Odum,Katharine C. Jocher,1929 **Neurobiology of Human Values** Jean-Pierre P. Changeux,Antonio Damasio,Wolf Singer,2006-03-30 Man has been pondering for centuries over the basis of his own ethical and aesthetic values Until recent times such issues were primarily fed by the thinking of philosophers moralists and theologians or by the findings of historians or sociologists relating to universality or variations in these values within various populations Science has avoided this field of investigation within

the confines of philosophy Beyond the temptation to stay away from the field of knowledge science may also have felt itself unconcerned by the study of human values for a simple heuristic reason namely the lack of tools allowing objective study For the same reason researchers tended to avoid the study of feelings or consciousness until over the past two decades this became a focus of interest for many neuroscientists It is apparent that many questions linked to research in the field of neuroscience are now arising The hope is that this book will help to formulate them more clearly rather than skirting them The authors do not wish to launch a new moral philosophy but simply to gather objective knowledge for reflection
