Teamwork in Palliative Care Peter Speck, 2006-09-14 Teamwork is a complex but essential component of palliative care The needs of people diagnosed with life threatening disease will vary greatly over time and it is rarely possible for just one professional to be able to provide adequate care In order to ensure an holistic approach the whole multi disciplinary team must be involved Inevitable questions arise from such an approach and this book seeks to address these How does a team come into being What different formats are there How might the patient contribute to the effectiveness of their care and the way in which the team operates What are the difficulties and frustrations encountered in developing and maintaining such teams What models of working and styles of leadership have developed How are power and authority handled within the team setting The importance of team building training support attention to group

process and stress management to protect the mental health of the team are explored The ethical issues inherent in palliative care such as consent autonomy confidentiality decision making within teams and the legal implications of such are also discussed The book concludes with one important question do we know if teams are the most effective way of providing care This book addresses key issues surrounding the role of the team in palliative care and is an essential guide to reappraising the importance of collaborative teamwork and enhancing understanding of existing team structures Palliative Care Nursing: Principles And Evidence For Practice Payne, Sheila, Seymour, Jane, Ingleton, Christine, 2008-08-01 This textbook in palliative care nursing draws together the principles and evidence that underpins practice to support nurses working in specialist palliative care settings and those whose work involves end of life care Resilience in Palliative Care Barbara Monroe, David Oliviere, 2007-09-06 The first book of its kind Resilience and Palliative Care Achievement in adversity takes the increasing international literature on resilience and applies it to palliative and end of life care The book offers an overview of all key aspects of palliative care presented through a resilience perspective Why do some patients and families break down while others surmounts the challenges facing them What interventions strengthen individual family and community coping This book aims to facilitate change with people facing the crisis of death dying and bereavement Much of the existing literature has focused on risk problems and vulnerability the emerging concept of resilience focuses on strengths and possibilities The total pain total care approach pioneered by Dame Cicely Saunders and St Christopher s Hospice now needs reinterpreting in the light of changing contexts and challenges The realities of demographic change and resource constrained health and social care environments have generated an increasingly risk focused approach to service delivery A narrowly medicalised approach has inevitable limitations professional care alone will be unable to meet need and demand in the face of ageing populations changing patterns of illness and the need for equity The resilience approach offers a counterbalance that harnesses the strengths of individuals and the communities in which they live and in which most of their dying will take place Resilience thinking emphasises the importance of public health and creates a partnership between patients professionals and community structures seeking to build community capacity and to deliver a preventive health care that will leave future generations less afraid of the dying and bereavement that will confront all of us This book offers insights into how at all levels of planning and delivering palliative care there is the opportunity to maximise coping build an infrastructure for self help and increase the capacity of strengthened teams and organisations *Encyclopedia of Social Work* ,1965
