Software Engineering For Parallel And Distributed Systems:

Tools and Environments for Parallel and Distributed Systems Amr Zaky,Ted Lewis,2012-12-06 Developing correct and efficient software is far more complex for parallel and distributed systems than it is for sequential processors Some of the reasons for this added complexity are the lack of a universally acceptable parallel and distributed programming paradigm the criticality of achieving high performance and the difficulty of writing correct parallel and distributed programs These factors collectively influence the current status of parallel and distributed software development tools efforts Tools and Environments for Parallel and Distributed Systems addresses the above issues by describing working tools and environments and gives a solid overview of some of the fundamental research being done worldwide Topics covered in this collection are mainstream program development tools performance prediction tools and studies debugging tools and research and nontraditional tools Audience Suitable as a secondary text for graduate level courses in software engineering and parallel and distributed systems and as a reference for researchers and practitioners in industry *Software Engineering for Parallel and Distributed Systems* Innes Jelly,Ian Gorton,Peter Croll,2016-01-09 A wide range of modern computer applications require the performance and flexibility of parallel and distributed systems Better software support is required if the technical advances in these systems are to be fully exploited by commerce and industry This involves the provision of specialised techniques and tools as well as the integration of standard software engineering methods This book will reflect current advances in this area and will address issues of theory and practice with contributions from academia and industry It is the aim of the book to provide a focus for information on this developing which will be of use to both researchers and practitioners **Second International Workshop on Software Engineering for Parallel and Distributed Systems** IEEE Computer Society,1997 The proceedings from the May 1997 workshop focus on software engineering issues that are particular to the development of applications for parallel and distributed systems Papers address issues of software verification and testing software development techniques and tools software design reuse and strategic directions of future research Also included are project reports and applications The papers are intended to maximize interaction and discussion among researchers working on application of formal methods validation testing tools design methodologies and coordination architectures Includes an author index only Annotation copyrighted by Book News Inc Portland OR Software Engineering for Parallel and Distributed Systems IEEE Computer Society,2000 Proceedings of a June 2000 symposium addressing issues that face software developers working with parallel and distributed systems Papers come from 10 different countries representing worldwide interest in the topic This year s meeting focuses on distributed systems development reflecting the growth in the deployment and importance of large scale distributed applications Subjects include scalability issues in CORBA formalization and verification of coherence protocols with the gamma framework a formalism for hierarchical mobile agents and a case study of exploratory visualization of distributed computations Lacks a subject index Annotation copyrighted by
