Riddle,R.E. Fairley,2012-12-06 This text contains the proceedings of a workshop on software develoDment tools held at Pingree Park Colorado in May 1979 The workshop for which we were co chair men was primarily but not exclusively concerned with a variety of tools supporting pre implementation phases of software development The workshop brought together researchers and practitioners from industrial governmental and academic sectors to compare and assess current work and to set some directions for future work in this emerging technical area The fifty participants represented research and development efforts in software tools within the United States Canada France Great Britain and Japan A list of participants appears at the end of the text Sponsorship was provided by the National Aeronautics and Space Administration the National Bureau of Standards the National Science Foundation and Digital Equipment Corporation The conference consisted of seven formal sessions and numerous organized and impromptu discussions Each session except the last included invited papers prepared remarks by discussants and an open discussion **Bioinformatics Data Skills** Vince Buffalo,2015-07-01 Learn the data skills necessary for turning large sequencing datasets into reproducible and robust biological findings With this practical guide you ll learn how to use freely available open source tools to extract meaning from large complex biological data sets At no other point in human history has our ability to understand life s complexities been so dependent on our skills to work with and analyze data This intermediate level book teaches the general computational and data skills you need to analyze biological data If you have experience with a scripting language like Python you re ready to get started Go from handling small problems with messy scripts to tackling large problems with clever methods and tools Process bioinformatics data with powerful Unix pipelines and data tools Learn how to use exploratory data analysis techniques in the R language Use efficient methods to work with genomic range data and range operations Work with common genomics data file formats like FASTA FASTQ SAM and BAM Manage your bioinformatics project with the Git version control system Tackle tedious data processing tasks with with Bash scripts and Makefiles **Python Scripting for Computational Science** Hans Petter Langtangen,2013-03-14 The primary purpose of this book is to help scientists and engineers work ing intensively with computers to become more productive have more fun and increase the reliability of their investigations Scripting in the Python programming language can be a key tool for reaching these goals 27 29 The term scripting means different things to different people By scripting I mean developing programs of an administering nature mostly to organize your work using

languages where the abstraction level is higher and program ming is more convenient than in Fortran C C or Java Perl Python Ruby Scheme and Tel are examples of languages supporting such high level programming or scripting To some extent Matlab and similar scientific com puting environments also fall into this category but these environments are mainly used for computing and visualization with built in tools while script ing aims at gluing a range of different tools for computing visualization data analysis file directory management user interfaces and Internet communi cation So although Matlab is perhaps the scripting language of choiee in computational science today my use of the term scripting goes beyond typi cal Matlab scripts Python stands out as the language of choice for scripting in computational science because of its very elean syntax rieh modulariza tion features good support for numerical computing and rapidly growing popularity What Scripting is About *Mastering Unix Shell Scripting* Randal K.
