Tutorials On Motion Perception:

Tutorials on Motion Perception Alexander H. Wertheim, 2012-12-06 From August 24-29 1980 the international Symposium on the Study of Motion Perception Recent Developments and Applications sponsored by NATO and organized by the editors of this book was held in Veldhoven the Netherlands The meeting was attended by about eighty scholars including psychologists neurologists physicists and other scientists from fourteen different countries During the symposium some fifty research papers were presented and a series of tutorial review papers were read and discussed The research presentations have been published in a special issue of the international journal of psychonomics Acta Psychologica Vol 48 1981 The present book is a compilation of the tutorial papers The tutorials were arranged around early versions of the chapters now appearing in this book The long discussions at the Veldhoven tutorial sessions resulted in extensive revisions of the texts prior to this publication Unfortunately this led to a delay in publication but we feel that this was justified by a greater depth of understanding which in our opinion has significantly increased the quality of the book As they now stand the chapters cover most of the issues relevant to the study of motion perception Also they clearly reflect the intensive exchange of knowledge that took place during the symposium As such we think that this book can be used both as an advanced text for students and scientists alike and as a comprehensive reference source

Visual Detection of Motion Andrew T. Smith, Robert J. Snowden, 1994 The brain's ability to detect movement within the retinal image is crucial not only for determining the trajectories of moving objects but also for identifying and interpreting image motion resulting from eye and head movements This book summarizes our knowledge of

how information about image motion is encoded in the brain Key Features Valuable reference source for those involved in the rapidly expanding area of motion perception Strong emphasis on integration of physiological computation and psychophysical approaches Topics include Principles of local motion detection Inputs to local motion detectors Integration of motion signals Higher order interpretation of motion Motion detection and eye movements *Multisensory Control of Movement* A. Berthoz,1993 The relationship between perception and action constitutes one of the most interesting aspects of brain function This book takes a multidisciplinary approach to studying the problems of manipulation orienting and navigating in humans and animals Its premise is that control of movement is based on a configuration of several sensory cues all providing input It will be of interest to researchers clinicians and advanced students in neuroscience psychology and neurology

Materials of the Tutorial Course EECS 500 ,1996 **Evolutionary Psychology** Steven J. C.

Gaulin,Donald McBurney,2004 The second edition of Evolutionary Psychology is the only book on the market that shows the relevance of evolutionary thinking to the entire range of psychological phenomena and it does so at a level appropriate for readers new to the field Each chapter deals with a particular topic by illustrating how an evolutionary approach illuminates behavior as a response to problems faced by humans in our evolutionary past The authors representing the disciplines of both psychology and anthropology present their material traditionally they first provide the foundation for understanding the fundamentals of modern evolutionary theory then systematically apply this theory to learning cognition perception emotion development pathology and more For any reader interested in a richer understanding of human behavior and the psychological mechanisms that underlie it **Vertigo** Thomas Brandt,2013-06-29 This monograph has been written for clinicians who are involved in the management of the dizzy patient and for scientists with a particular interest in the multi

sensorimotor mechanisms that subservise spatial orientation motion perception and ocular motor and postural control Special emphasis has been put on making the correct diagnosis and detailed recommendations have been given for specific treatments The second edition has resulted in an almost completely new book due to the dramatic expansion in the 1990s of our understanding of vestibular function and disorders A few relevant examples include the novel concept of canalolithiasis as opposed to cupulolithiasis both of which are established causes of typical posterior and horizontal canal benign paroxysmal positioning vertigo familial episodic ataxia type II have been identified as inherited canalopathies otolithic syndromes were recognized as a variety separate from semicircular canal syndromes several new central vestibular syndromes have been described localized and attributed to vestibular pathways and centres a new classification based on the three major planes of action of the vestibulo-ocular reflex is available for central vestibular syndromes and the mystery of the location and function of the multisensory vestibular cortex is slowly being unravelled This book differs from other clinical textbooks in that it is not divided into two parts anatomy and physiology on the one hand and disorders on the other

Emergent Techniques for Assessment of Visual Performance National Research Council, 1985-01-01 Recent vision research has led to the emergence of new techniques that offer exciting potential for a more complete assessment of vision in clinical industrial and military settings Emergent Techniques for Assessment of Visual Performance examines four areas of vision testing that offer potential for improved assessment of visual capability including contrast sensitivity function dark focus of accommodation dynamic visual acuity and dynamic depth tracking and ambient and focal vision In contrast to studies of accepted practices this report focuses on emerging techniques that could help determine whether people have the vision necessary to do their jobs In addition to examining some of these emerging techniques the report identifies their usefulness in predicting performance on other visual and visual motor tasks and makes recommendations for future research Emergent Techniques for Assessment of Visual Performance provides summary recommendations for research that will have significant value and policy implications for the next 5 to 10 years The content and conclusions of this report can serve as a useful resource for those responsible for screening industrial and military visual function

The Neural and Behavioural Organization of Goal-directed Movements Marc Jeannerod, 1990 Goal directed movement is central to the relationship between brain and behavior in humans and other animals This book presents a detailed investigation of the topic one that integrates psychology and physiology The author's account is based on a large body of experimental data from human and animal work with particular emphasis on clinical cases It probes such questions as Are complex movements organized on the same mode as simple ones How rigidly organized are coordinated actions like orienting or grasping Where do visual feedback signals arise The author's work takes into account the growing acceptance of the idea that movements are not directly dependent upon sensory events but that they are governed by internal representations which are built according to specific
