Visual Statistics Forrest W. Young, Pedro M. Valero-Mora, Michael Friendly, 2011-09-15 A visually intuitive approach to statistical data analysis Visual Statistics brings the most complex and advanced statistical methods within reach of those with little statistical training by using animated graphics of the data Using ViSta The Visual Statistics System developed by Forrest Young and Pedro Valero Mora and available free of charge on the Internet students can easily create fully interactive visualizations from relevant mathematical statistics promoting perceptual and cognitive understanding of the data's story An emphasis is placed on a paradigm for understanding data that is visual intuitive geometric and active rather than one that relies on convoluted logic heavy mathematics systems of algebraic equations or passive acceptance of results A companion Web site complements the book by further demonstrating the concept of creating interactive and dynamic graphics The book provides users with the opportunity to view the graphics in a dynamic way by illustrating how to analyze statistical data and explore the concepts of visual statistics Visual Statistics addresses and features the following topics Why use dynamic graphics A history of statistical graphics Visual statistics and the graphical user interface Visual statistics and the scientific method Character based statistical interface objects Graphics based statistical interfaces Visualization for exploring univariate data This is an excellent textbook for undergraduate courses in data analysis and regression for students majoring or minoring in statistics mathematics science engineering and computer science as well as for graduate level courses in mathematics The book is also ideal as a reference self study guide for engineers scientists and mathematicians With contributions by highly regarded professionals in the field Visual Statistics not only improves a student's understanding of statistics but also builds confidence to overcome problems that may have previously been intimidating *Visual Statistics* Forrest W. Young, Pedro M. Valero-Mora, Michael Friendly, 2006-08-04 Visual statistics accomplishes the goal of bringing the most complex and advanced statistical methods within the reach of those with little statistical training by using animated graphics of the data This text shows how to make dynamic visualizations that are fully interactive and respond instantly to the user's nudges and prods *Visual Statistics 2.0* David P. Attention and consciousness in different senses Naotsugu Tsuchiya,Jeroen J. Van

Boxtel,2013-06-03 Although often used in everyday speech and in the scholarly literature selective attention and consciousness lack clear undisputed definitions Partly because of this deficit there exists a lively debate on the relationship between the two Nevertheless attention has been studied scientifically for a long time because a variety of tasks allow researchers to control several of its aspects e g focused and feature based attention Consciousness as a scientific subject of study has emerged more recently but is now rapidly gaining traction Scientific studies of consciousness concern the state or level of consciousness e g awake as opposed to in coma dreamless sleep or under anaesthesia as well as the contents of consciousness or the phenomenology of perception With the increase in consciousness focused research there is a concomitant surge in research examining the relationship between attention and consciousness This relationship between attention and consciousness is the topic of this Research Topic Contributions related to or focused solely on attention or on consciousness will not be considered It had long been assumed that attention and consciousness are inextricably intertwined two sides of the same coin However recently substantial evidence has emerged that attention and consciousness are interacting but separable processes It is however debated how tight the interactions are and what the exact nature of the

relationship is Therefore we invite researchers from different camps to provide opinionated but balanced literature reviews Different groups will interpret the same data in different ways We feel that combining these views in one Research Topic is immensely valuable to researchers from different fields Apart from reviews we also invite potential contributors to provide new and exciting evidence in the form of original contributions that may support any of the different views Even though attention and consciousness are critical aspects of many different cognitive processes they are mainly studied though not exclusively in the domain of visual perception In other sensory modalities e g olfaction or audition it is currently not clear whether distinctions between attention and consciousness exist which is even more true for other cognitive processes such as memory Therefore we specifically invite contributions covering the auditory somatosensory olfactory and memory domain We ask all contributors to provide discussions on the relationship between attention and consciousness and focus on 1 the influence of attention on sensory processing 2 the formation of conscious perception 3 the evidence for unconscious processing and its modulation by attention 4 potential indications for dissociations between attention and consciousness e g does paying attention to a stimulus decrease performance on e g a discrimination task 5 neuroimaging and neurophysiology data pertaining to these questions Often one is caught in one s own research field and lacks the time or the knowledge to delve into another field This Research Topic should provide a great overview in great breadth of the current state of knowledge on the links between attention and consciousness and their interactions in several different sensory modalities
