Web Studies:

Internet Studies Dr Panayiota Tsatsou,2014-10-28 A comprehensive overview of the field Internet Studies considers key issues of social importance that the study of the Internet draws upon At the same time it examines the role of the Internet in social research and the development of highly interdisciplinary and rapidly developing Internet research Hence this volume maps out areas of certainty and uncertainty in the study of the Internet and as such it will be of interest to scholars and students of media and communication sociology and social research methods **International Handbook of Internet Research** Jeremy Hunsinger,Lisbeth Klastrup,Matthew Allen,2010-06-17 Internet research spans many disciplines From the computer or information s ences through engineering and to social sciences humanities and the arts almost all of our disciplines have made contributions to internet research whether in the effort to understand the effect of the internet on their area of study or to investigate the social and political changes related to the internet or to design and develop so ware and hardware for the network The possibility and extent of contributions of internet research vary across disciplines as do the purposes methods and outcomes Even the epistemological underpinnings differ widely The internet then does not have a discipline of study for itself It is a eld for research Baym 2005 an open environment that simultaneously supports many approaches and techniques not otherwise commensurable with each other There are of course some inhibitions that limit explorations in this eld research ethics disciplinary conventions local and national norms customs laws borders and so on Yet these limits on the int net as a eld for research have not prevented the rapid expansion and exploration of the internet After nearly two decades of research and scholarship the limits are a positive contribution providing bases for discussion and interrogation of the contexts of our research making internet research better for all These limits challenges that constrain the theoretically limitless space for internet research create boundaries that give de nition to the eld and provide us with a particular topography that enables research and investigation Proceedings of the 2nd International Conference on Web Studies Everardo Reyes,2018 *Food Webs and Biodiversity* Axel G. Rossberg,2013-06-03 Food webs have now been addressed in empirical and theoretical research for more than 50 years Yet even elementary foundational issues are still hotly debated One difficulty is that a multitude of processes need to be taken into account to understand the patterns found empirically in the structure of food webs and communities Food Webs and Biodiversity develops a fresh comprehensive perspective on food webs Mechanistic explanations for several known macroecological patterns are derived from a few fundamental concepts which are quantitatively linked to field observables An argument is developed that food webs will often be the key to understanding patterns of biodiversity at community level Key Features Predicts generic characteristics of ecological communities in invasion extirpation equilibrium Generalizes the theory of competition to food webs with arbitrary topologies Presents a new testable quantitative theory for the mechanisms determining species richness in food webs and other new results Written by an internationally respected expert in the field With global warming and other pressures on

ecosystems rising understanding and protecting biodiversity is a cause of international concern This highly topical book will be of interest to a wide ranging audience including not only graduate students and practitioners in community and conservation ecology but also the complex systems research community as well as mathematicians and physicists interested in the theory of networks This is a comprehensive work outlining a large array of very novel and potentially game changing ideas in food web ecology Ken Haste Andersen Technical University of Denmark I believe that this will be a landmark book in community ecology it presents a well established and consistent mathematical theory of food webs It is testable in many ways and the author finds remarkable agreements between predictions and reality G za Mesz na E tv s University Budapest
