Designing Embedded Internet Devices Dan Eisenreich,Brian DeMuth,2003 Embedded internet and internet

appliances are the focus of great attention in the computing industry as they are seen as the future of computing. The design of such devices presents many technical challenges. This book is the first guide available that describes how to design internet access and communications capabilities into embedded systems. It takes an integrated hardware software approach using the Java programming language and industry standard microcontrollers. Numerous illustrations and code examples enliven the text. This book shows how to build various sensors and control devices that connect to the TINI interfaces, explains how to write programs that control them in Java and then ties them all together in practical applications. Included is a discussion on how these technologies work where to get detailed specifications and ideas for the reader to pursue beyond the book. The first guide to designing internet access and communications capabilities into embedded systems. Takes an integrated hardware software approach using the Java programming language an industry standard

Emerging Solutions for Future Manufacturing Systems Luis M. Camarinha-Matos, 2006-01-04 Industries and particularly the manufacturing sector have been facing difficult challenges in a context of socio economic turbulence characterized by complexity as well as the speed of change in causal interconnections in the socio economic environment. In order to respond to these challenges companies are forced to seek new technological and organizational solutions. In this context two main characteristics emerge as key properties of a modern automation system: agility and distribution. Agility because systems need not only to be flexible in order to adjust to a number of a priori defined scenarios but rather must cope with unpredictability. Distribution in the sense that automation and business processes are becoming distributed and supported by collaborative networks. **Emerging Solutions for Future Manufacturing Systems** includes the papers selected for the BASYS 04 conference which was held in Vienna Austria in September 2004 and sponsored by the International Federation for Information Processing IFIP
