page or file contents HTML code describes Web page content mainly text and graphic images only in terms of how it is to be displayed and interacted with XML data is known as self describing or self defining meaning that the structure of the data is embedded with the data thus when the data arrives there is no need to pre build the structure to store the data it is dynamically understood within the XML The XML format can be used by any individual or group of individuals or companies that want to share information in a consistent way XML is actually a simpler and easier to use subset of the Standard Generalized Markup Language SGML which is the standard to create a document structure The basic building block of an XML document is an element defined by tags An element has a beginning and an ending tag All elements in an XML document are contained in an outermost element known as the root element XML can also support nested elements or elements within elements This ability allows XML to support hierarchical structures Element names describe the content of the element and the structure describes the relationship between the elements An XML document is considered to be well formed that is able to be read and understood by an XML parser if its format complies with the XML specification if it is properly marked up and if elements are properly nested XML also supports the ability to define attributes for elements and describe characteristics of the elements in the beginning tag of an element **Programming the World Wide Web** Robert W. Sebesta,2003 Programming the World Wide Web provides a comprehensive introduction to the programming tools and skills required for building and maintaining server sites on the Web as well as teaching students how to develop platform independent sites Client side tools such at HTML and sever side tools such as CGI are all covered This book is geared toward students who already have a solid background in some language that supports object oriented programming The author has reorganized the chapters for the second edition of the book They are now grouped into three parts each with a specific focus Part One covers the fundamentals of programming the Web Part Two focuses on client side programming and Part Three focuses on server side programming **Functional and Logic Programming** ,2006 Programming Web Services with XML-RPC Simon St. Laurent,Joe Johnston,Edd Wilder-James,Dave Winer,2001-06-21 Have you ever needed to share processing between two or more computers running programs written in different languages on different operating systems Or have you ever wanted to publish information on the Web so that programs other than browsers could work with it XML RPC a system for remote procedure calls built on XML and the ubiquitous HTTP protocol is the solution you ve been looking for Programming Web Services with XML RPC introduces the simple but powerful capabilities of XML RPC which lets you connect programs running on different computers with a minimum of fuss by wrapping procedure calls in XML and establishing simple pathways for calling functions With XML RPC Java programs can talk to Perl scripts which can talk to Python programs ASP applications and so on You can provide access to procedure calls without having to worry about the system on the other end so it s easy to create services that are available on the Web XML RPC isn t the only solution for web services the Simple Object Access Protocol SOAP is another much hyped protocol for implementing web services While XML

RPC provides fewer capabilities than SOAP it also has far fewer interoperability problems and its capabilities and limitations are much better understood XML RPC is also stable with over 30 implementations on a wide variety of platforms so you can start doing real work with it immediately Programming Web Services with XML RPC covers the details of five XML RPC implementations so you can get started developing distributed applications in Java Perl Python ASP or PHP The chapters on these implementations contain code examples that you can use as the basis for your own work This book also provides in depth coverage of the XML RPC specification which is helpful for low level debugging of XML RPC clients and servers And if you want to build your own XML RPC implementation for another environment the detailed explanations in this book will serve as a foundation for that work **Journal of Object-oriented Programming** ,2000 <u>Definitive XML Application Development</u> Lars Marius Garshol,2002 In this book leading XML developer Lars Marius Garshol covers every essential aspect of XML programming from basic principles through advanced techniques utilizing DOM SAX XSLT XPath schemas and other key XML standards Garshol presents scores of code examples based on Python a cross platform language that is exceptionally well suited for XML development Garshol also presents new insights into XML application design and optimization as well as complete sample applications Book jacket *The Web Warrior Guide to Web Programming* Xue Bai,2003 This overview of the programming languages and tools used to develop dynamic data driven interactive applications is designed for the beginning programmer It covers the most powerful useful programming languages and tools clearly and completely *Curl Programming Bible* Nikhil Damle,Gary Gray,Bruce Mount,2002-05-31 Provides readers with an in depth understanding of Curl technologies and how to apply them to real world situations Coverage includes Curl language syntax Text formatting scripting OO programming and rich 3D graphics Support for emerging technologies like SOAP Web Services and Peer to Peer Incorporating Curl technologies into existing Web infrastructure Embedding Curl content within an HTML page Accessing Databases on the server Creating and packaging Curl applets for Web delivery ABOUT THE WEB SITE Source code and examples Links to Curl developer resources such as white papers and developer forums Links to download the Surge Development Lab and Surge Plug in *Building XML Applications* Simon St. Laurent,Ethan Cerami,1999 Annotation XML eXtensible Markup Language is the newest format for transferring data across the WWW other networks Java is the newest most powerful programming language for creating secure interactive Internet applications Together XML Java represent the most powerful toolkit for creating the next generation of advanced Internet applications from financial analysis documentation management to electronic commerce
