Perspectives on the Future of Software Engineering Jürgen Münch, Klaus Schmid, 2013-06-13 The dependence on quality software in all areas

of life is what makes software engineering a key discipline for today's society. Thus over the last few decades it has been increasingly recognized that it is particularly important to demonstrate the value of software engineering methods in real world environments a task which is the focus of empirical software engineering. One of the leading protagonists of this discipline worldwide is Prof. Dr. Dr. h. c. Dieter Rombach who dedicated his entire career to empirical software engineering. For his many important contributions to the field he has received numerous awards and recognitions including the U.S. National Science Foundation's Presidential Young Investigator Award and the Cross of the Order of Merit of the Federal Republic of Germany. He is a Fellow of both the ACM and the IEEE Computer Society. This book published in honor of his 60th birthday is dedicated to Dieter Rombach and his contributions to software engineering in general as well as to empirical software engineering in particular. This book presents invited contributions from a number of the most internationally renowned software engineering researchers like Victor Basili, Barry Boehm, Manfred Broy, Carlo Ghezzi, Michael Jackson, Leon Osterweil and of course by Dieter Rombach himself. Several key experts from the Fraunhofer IESE, the institute founded and led by Dieter Rombach, also contributed to the book. The contributions summarize some of the most important trends in software engineering today and outline a vision for the future of the field. The book is structured into three main parts. The first part focuses on the classical foundations of software engineering such as notations, architecture and processes, while the second addresses empirical software engineering in particular as the core field of Dieter Rombach's contributions. Finally, the third part discusses a broad vision for the future of software engineering.

Enterprise Interoperability VI Kai Mertins, Frédéric Bénében, Raúl Poler, Jean-Paul Bourrières, 2014-02-19. In 2007 INTEROP V Lab defined Enterprise Interoperability as the ability of an enterprise system or application to interact with others at a low cost with a flexible approach. Enterprise Interoperability VI brings together a peer reviewed selection of over 40 papers ranging from academic research through case studies to industrial and administrative experience of interoperability. It shows how in a scenario of globalised markets the capacity to cooperate with other firms efficiently becomes essential in order to remain in the market in an economically, socially and environmentally cost effective manner and that the most innovative enterprises are beginning to redesign their business model to become interoperable. This goal of interoperability is vital not only from the perspective of the individual enterprise but also in the new business structures that are now emerging such as supply chains, virtual enterprises, interconnected organisations or extended enterprises as well as in mergers and acquisitions. Establishing efficient and relevant collaborative situations requires managing interoperability.

from a dynamic perspective a relevant and efficient collaboration of organizations might require adaptation to remain in line with potentially changing objectives evolving resources and unexpected events for example Many of the papers contained in this the seventh volume of Proceedings of the I ESA Conferences have examples and illustrations calculated to deepen understanding and generate new ideas The I ESA 14 Conference is jointly organised by Ecole des Mines Albi Carmaux on behalf of PGSO and the European Virtual Laboratory for Enterprise Interoperability INTEROP VLab and supported by the International Federation for Information Processing IFIP A concise reference to the state of the art in systems interoperability Enterprise Interoperability VI will be of great value to engineers and computer scientists working in manufacturing and other process industries and to software engineers and electronic and manufacturing engineers working in the academic environment [Computerworld](#) ,1986-06-30 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide Computerworld s award winning Web site Computerworld com twice monthly publication focused conference series and custom research form the hub of the world s largest global IT media network **Enterprise Resource Planning and Supply Chain Management** Karl E.
