

Vectors are the same if they have the same direction and magnitude.

A negative vector has the same magnitude but is in the opposite direction.

A vector can be multiplied by a scalar to make it shorter or longer or reverse the direction.

Vectors can be added together to create a pathway from one point to another.

$$\overline{AC} = a + b$$

Two vectors are parallel if one is a multiple of the other.

Solved Problems in Classical Electromagnetism J. Pierrus,2018-08-02 Classical electromagnetism one of the fundamental pillars of physics is an important topic for all types of physicists from the theoretical to the applied The subject is widely recognized to be one of the most challenging areas of the physics curriculum both for students to learn and for lecturers to teach Although textbooks on electromagnetism are plentiful hardly any are written in the question and answer style format adopted in this book It contains nearly 300 worked questions and solutions in classical electromagnetism and is based on material usually encountered during the course of a standard university physics degree Topics covered include some of the background mathematical techniques electrostatics magnetostatics elementary circuit theory electrodynamics electromagnetic waves and electromagnetic radiation For the most part the book deals with the microscopic theory although we also introduce the important subject of macroscopic electromagnetism as well Nearly all questions end with a series of comments whose purpose is to stimulate inductive reasoning and reach various important conclusions arising from the problem Occasionally points of historical interest are also mentioned Both analytical and numerical techniques are used in obtaining and analyzing solutions All computer calculations are performed with MathematicaCO and the relevant code is provided in a notebook either in the solution or the comments *Engineering Statics with MATLAB®* Lester W. Schmerr Jr.,2024-03-07 This text makes use of symbolic algebra and vector matrix algebra to demonstrate a new approach to learning statics Symbolic solutions are obtained together with the types of solutions covered in other texts so that students can see the advantages of this new approach This innovative text is an extension of second generation vector Statics courses to a new third generation matrix vector Statics course a course that addresses deformable as well as rigid bodies and employs MATLAB MATLAB is used as a calculator whose built in functions are used to solve statics problems This text uses vectors and matrices to solve both statically determinate rigid body problems and statically indeterminate problems for deformable bodies The inclusion of statically indeterminate problems is unique to this text It is made possible by using symbolic algebra and a new simplified vector matrix formulation that combines the equations of equilibrium the homogeneous solutions to those equations and a description of the flexibilities found in the deformable elements of a structure to solve directly for the
