[Dialogue with Robots: Constructive Approaches for Understanding Communication](#) Randy Gomez, Casey Kennington, Koji Inoue, Peter Ford Dominey, Takahisa Uchida, 2025-12-10 In recent years robots that have dialogues with humans have become increasingly common in our daily lives For example smart speakers and spoken dialogue systems installed in smartphones and robots that interact with people in stores have been developed Dialogue systems commonly fall under two scenarios of use task oriented and non task oriented Task oriented systems perform interactions necessary to achieve a specific goal e.g. making a reservation On the other hand non task oriented systems perform interactions in which the focus of the interaction is the dialogue itself While the development of speech recognition technology has enabled these systems to interact with people their ability to engage in meaningful dialogue is still limited This Research Topic focuses on social dialogue with robots which has been actively studied in recent years This Research Topic calls for papers on the research and development necessary to allow robots and people to engage in rich social dialogue First we need basic technologies for robots to understand human interaction In addition to large scale
