Solving Singular Systems:

Methods of Solving Singular Systems of Ordinary Differential Equations I. U. Eremeevich Boiakov, 1992 This text is a response to the author's previous monograph *Regular and Singular Systems of Linear Ordinary Differential Equations*. He has applied the results presented in that book to construct stable difference and other approximations to singular systems of ordinary differential equations. He also gives an account of the present state of the problem and a review of the latest publications.

Solving Singular Systems Using Orthogonal Functions Stephen L. Campbell, Kevin D. Yeomans, NORTH CAROLINA STATE UNIV AT RALEIGH CENTER FOR RESEARCH IN SCIENTIFIC COMPUTATION., 1987 Orthogonal functions and in particular Walsh functions have been advocated in the literature as a method of approximating the solutions of singular systems $Ex = Fx + Bu$ of index k . This paper gives the first analysis of the accuracy of these approximations. For Walsh functions divergence is shown for $k \geq 3$ and convergence for $k \leq 1$. The index two case is also analyzed.

On Modifying Singular Values to Solve Possible Singular Systems of Non-Linear Equations David M. Gay, National Bureau of Economic Research, 1976 We show that if a certain nondegeneracy assumption holds it is possible to guarantee the existence of a solution to a system of nonlinear equations $f(x) = 0$ whose Jacobian matrix $J(x)$ exists but maybe singular. The main idea is to modify small singular values of $J(x)$ in such a way that the modified Jacobian matrix $\tilde{J}(x)$ has a continuous pseudoinverse $\tilde{J}^+(x)$ and that a solution x^* of $f(x) = 0$ may be found by determining an asymptote of the solution to the initial value problem $x(0) = x_0, \dot{x} = -\tilde{J}^+(x)f(x)$. We briefly discuss practical algorithmic implications of this result. Although the nondegeneracy assumption may fail for many systems of interest indeed if the assumption holds and $J(x)$ is non-singular then x^* is unique algorithms using \tilde{J}^+ may enjoy a larger region of convergence than those that require an approximation to J to the 1 power x .

Krylov Methods for Nonsymmetric Linear Systems Gérard Meurant, Jurjen Duintjer Tebbens, 2020-10-02 This book aims to give an encyclopedic overview of the state of the art of Krylov subspace iterative methods for solving nonsymmetric systems of algebraic linear equations and to study their mathematical properties. Solving systems of algebraic linear equations is among the most frequent problems in scientific computing it is used in many disciplines such as physics, engineering, chemistry, biology and several others. Krylov methods have progressively emerged as the iterative methods with the highest efficiency while being very robust for solving large linear systems they may be expected to remain so independent of progress in modern computer related fields such as parallel and high performance computing. The mathematical properties of the methods are described and analyzed along with their behavior in finite precision arithmetic. A number of numerical examples demonstrate the properties and the behavior of the described methods. Also considered are the methods implementations and coding as Matlab like functions. Methods which became popular recently are considered in the general framework of Q-OR (quasi-orthogonal) Q-MR (quasi-minimum residual).

methods This book can be useful for both practitioners and for readers who are more interested in theory Together with a review of the state of the art it presents a number of recent theoretical results of the authors some of them unpublished as well as a few original algorithms Some of the derived formulas might be useful for the design of possible new methods or for future analysis For the more applied user the book gives an up to date overview of the majority of the available Krylov methods for nonsymmetric linear systems including well known convergence properties and as we said above template codes that can serve as the base for more individualized and elaborate implementations
