Energy Agency, 2004 Renewable Energy Market and Policy Trends in IEA Countries reviews the experience of IEA countries after the oil crisis in the 1970s initiated a surge of investments in renewables research and development While use of renewables has grown rapidly they still account for only a small portion of the IEA energy mix Hydropower bioenergy and geothermal energy are mature technologies that contribute about 5-6% to primary energy supply Solar wind and other new renewables have experienced rapid technology development but as yet they represent only a small share This work examines policies and measures that have been introduced in IEA countries to increase the cost effective deployment of renewables reviews the objectives behind these policies and evaluates the results The aim is to identify best practices in order to assist governments in making future policy decisions

Introduction to Advanced Renewable Energy Systems S. C. Bhatia, 2014  
Annotation Renewable energy is a natural energy which does not have a limited supply Renewable energy can be used again and again and will never run out Renewable energy is derived from natural processes that are replenished constantly In its various forms it derives directly from the sun or from heat generated deep within the earth Included in the definition is electricity and heat generated from solar wind ocean hydropower biomass geothermal resources and biofuels and hydrogen derived from renewable resources The book is a complete treatise on renewable energy sources and also includes issues relating to biofuels It aims to serve as a text for the undergraduate and postgraduate students in relevant disciplines and a reference for all the professionals in related fields
