lack of systematic understanding of the fabrication design and construction processes using bamboo as a modern industrial material This is the first book to describe a new category of structural systems constructed with engineered bamboo It gives a definition of engineered bamboo glulam in an analogy with steel structures and wood structures Structural systems and components have been designed using glulam then industrialized production processes of glulam are described Based on state of the art research design guidelines are suggested in a comparable and parallel approach to the existing guidelines for composite wood structures The book also discusses bamboo structures in the context of sustainable development including the benefits of using bamboo as an alternative or replacement for wood especially for developing countries many of which are faced with the lack or destruction of forest resources
