Squeak Programmation:

Squeak Stephane Ducasse,2006-11-22 Are you completely new to programming Do you want to have fun learning to program Squeak Learn Programming with Robots will teach you core programming concepts based on simple visual problems that involve manipulation of robots or turtles You will learn basic programming concepts like loops abstractions composition and conditionals Each chapter is structured so that it can be turned into a one or two hour lab session And while the structured content explains solid principles of object oriented programming you ll just have fun going through the sequence of easy examples with the turtle And be sure to check out BotsInc the companion learning environment for this book

Modular Programming Languages László Böszörményi,Peter Schojer,2003-08-13 This book constitutes the refereed proceedings of the international Joint Modular Languages Conference JMLC 2003 held in Klagenfurt Austria in August 2003 The 17 revised full papers and 10 revised short papers presented together with 5 invited contributions were carefully reviewed and selected from 47 submissions The papers are organized in topical sections on architectural concepts and education component architectures language concepts frameworks and design principles compilers and tools and formal aspects and reflective programming

Object-oriented Programming with Smalltalk Harald Wertz,2015-11-26 Object oriented programming is a way of thinking about problems Smalltalk is one of the purest incarnations of an object oriented programming language Using a pedagogical approach this book covers all aspects of object oriented programming first through the study of various preexisting Smalltalk classes their implementation and use then through a detailed description of an implementation of an interactive Lindenmayer system and through implementation of a series of calculators The author addresses such subjects as graphics programming dependency mechanisms and hierarchical specialization This book fills the gap for an in depth self study reference permitting the reader to master all aspects of object oriented programming through a large set of exercises with highly detailed resources Downloadable software content for practice applications Covers all aspects of Smalltalk the concepts of primitive objects classes and instances static and dynamic inheritance and methods as well as graphical programming the dependency mechanisms and the handling of exceptions Features in depth studies of two programming projects and annotated solutions to all exercises and appendices

Fast Packrat Parsing in a Live Programming Environment Friedrich Schöne,Patrick Rein,Robert Hirschfeld,2022-06-14 Language developers who design domain specific languages or new language features need a way to make fast changes to language definitions Those fast changes require immediate feedback Also it should be possible to parse the developed languages quickly to handle extensive sets of code Parsing expression grammars provides an easy to understand method for language definitions Packrat parsing is a method to parse grammars of this kind but this method is unable to handle left recursion properly Existing solutions either partially rewrite left recursive rules and partly forbid them or use complex extensions to packrat parsing that are hard to understand and cost intensive We investigated methods to make parsing as fast as possible using easy to follow algorithms

while not losing the ability to make fast changes to grammars We focused our efforts on two approaches One is to start from an existing technique for limited left recursion rewriting and enhance it to work for general left recursive grammars The second approach is to design a grammar compilation process to find left recursion before parsing and in this way reduce computational costs wherever possible and generate ready to use parser classes Rewriting parsing expression grammars is a task that if done in a general way unveils a large number of cases such that any rewriting algorithm surpasses the complexity of other left recursive parsing algorithms Lookahead operators introduce this complexity However most languages have only little portions that are left recursive and in virtually all cases have no indirect or hidden left recursion This means that the distinction of left recursive parts of grammars from components that are non left recursive holds great improvement potential for existing parsers In this report we list all the required steps for grammar rewriting to handle left recursion including grammar analysis grammar rewriting itself and syntax tree restructuring Also we describe the implementation of a parsing expression grammar framework in Squeak Smalltalk and the possible interactions with the already existing parser Ohm S We quantitatively benchmarked this framework directing our focus on parsing time and the ability to use it in a live programming context Compared with Ohm we achieved massive parsing time improvements while preserving the ability to use our parser it as a live programming tool The work is essential because for one we outlined the difficulties and complexity that come with grammar rewriting Also we removed the existing limitations that came with left recursion by eliminating them before parsing

Pattern Matching for an Object-oriented and Dynamically Typed Programming Language Felix Geller,Robert Hirschfeld,Gilad Bracha,2010

Pattern matching is a well established concept in the functional programming community It provides the means for concisely identifying and deconstructing values of interest This enables a clean separation of data structures and respective functionality as well as dispatching functionality based on more than a single value Unfortunately expressive pattern matching facilities are seldomly incorporated in present object oriented programming languages We present a seamless integration of pattern matching facilities in an object oriented and dynamically typed programming language Newspeak We describe language extensions to improve the practicability and integrate our additions with the existing programming environment for Newspeak This report is based on the first author s master s thesis
