The Shape Of Future Technology:

The Shape of Future Technology Peter Brödner, 1990-09-24 Mike Cooley One of the most remarkable features of modern industrial society is the gap between that which technology could provide for society its potential and that which it actually does provide for society its reality We have for example complex control systems which can guide a missile to another continent with extraordinary accuracy yet the blind and the disabled have to stagger around our cities in very much the same way as they did in mediaeval times There are advanced communication systems enabling messages to be sent around the world in a fraction of a second but it now takes longer to send an ordinary letter from Washington to New York than it did in the days of the stage coach Such a growing chasm between potential and reality is giving rise to a thorough questioning of many of the orthodoxies in these areas and the priorities on which they are based Similar contradictions even if at this stage less obvious and dramatic abound in the field of manufacturing technology There we find technologies which have the potential of liberating human beings from soul destroying routine backbreaking tasks and leave them free to engage in more creative work but which in reality often end up reducing the human being to a mere machine appendage acted upon by the technology and becoming a passive pathetic element in the productive system rather than a creative dynamic human being

Using a range of illustrations, original diagrams, photographs and historical explanations, Future Tech explores the key developments at the forefront of vehicular technology ranging from current advancements such as hydrogen cell cars to projects still in early stages of development such as jet packs, flying trains and wave piercing catamarans. The technologies are examined thoroughly and their advantages and disadvantages clearly assessed.
