Yo Robot

Isaac Asimov

Yo Robot:

Yo, Robot Isaac Asimov, 2011-01-01 Una investigación llevada a cabo por un periodista acerca de la trayectoria de la robopsicóloga Susan Calvin da pie a los nueve relatos que componen esta novela. Publicada cuando la electrónica digital estaba en su infancia, *Yo robot* resultó ciertamente visionaria. Aquí formuló Isaac Asimov por primera vez las tres leyes fundamentales de la robótica que rigen el comportamiento en los diferentes conflictos que se presentan entre humanos y robots que se convertirán en una de las piedras angulares de la ciencia ficción. La modernidad y éxito de este libro se explica por la audacia en la composición y por la aplastante lógica en sus reflexiones que se adentran en el campo de la ética y de la psicología. *Yo robots* uno de los pocos títulos de ciencia ficción que han superado con amplitud el círculo de lectores especialmente aficionados entre los que a menudo se considera una obra cumbre. Su influencia y la de las tres leyes de la robótica en ella enunciadas es muy notable y ha servido de inspiración para incontables novelas cómicas y películas.

Advanced Intelligent Computing. Theories and Applications De-Shuang Huang, Martin McGinnity, Laurent Heutte, Xiao-Ping Zhang, 2010-08-14 The International Conference on Intelligent Computing ICIC was formed to provide an annual forum dedicated to the emerging and challenging topics in artificial intelligence, machine learning, pattern recognition, image processing, bioinformatics and computational biology. It aims to bring together researchers and practitioners from both academia and industry to share ideas, problems and solutions related to the multifaceted aspects of intelligent computing. ICIC 2010 held in Changsha, China, August 18-21, 2010, constituted the 6th International Conference on Intelligent Computing. It built upon the success of ICIC 2009, ICIC 2008, ICIC 2007, ICIC 2006 and ICIC 2005 that were held in Ulsan, Korea; Shanghai, Qingdao, Kunming and Hefei, China respectively. This year the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing. Its aim was to unify the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications. Therefore the theme for this conference was **Advanced Intelligent Computing: Technology and Applications**. Papers focusing on this theme were solicited, addressing theories, methodologies and applications in science and technology.

Artificial Intelligence Miguel D'Addario, 2021-09-04 Artificial Intelligence (AI) is a science with a wide study field dedicated to the study of the human brain and intelligence with the purpose of mathematically modeling different logic and processes that help to facilitate and automate problems in different knowledge areas. Its applications are varied and are present in many fields on which its main model is the human being and the problems presented need to be taken into account.

CAD/CAM Robotics and Factories of the Future Birendra Prasad, 2012-12-06 The complete shop floor automation, a lights-out factory where workers initially set up all machines, turn off the lights, lock the door and the machine churns up the parts, remains an unfulfilled dream. Yet when we look at the enormity of the process of automation and integration, even for the most simply

conceived part factory we can recognize that automation has been applied and is being applied more so when it made sense from a cost benefit standpoint It is our nature to be dissatisfied with near term progress but when we realize how short a time the tools to do that automation have been available the progress is clearly noteworthy considering the multitudes of factors and the environment we have to deal with Most of the automation problems we confront in today's environment are multidisciplinary in nature They require not just the knowledge and experience in various distinct fields but good cooperation from different disciplined organizations to adequately comprehend and solve such problems In Volume III we have many examples that reflect the current state of the art techniques of robotics and plant automation The papers for Volume III have been arranged in a logical order of automation planning automated assembly robot programming and simulation control motion coordination communication and networking to factories of the future
